WHAT IS GAMMA?

GAMMA stands for GAS ASSIST MOLDED MARINE ASSEMBLY. Our patented construction technology consists of Six Gas Assist Channels (20mm width) increasing rigidity and hiding wire harnesses for lights or speakers. It is made with 1/4" LG ABS POLYMER and is UV Resistant. The High Gloss, Paint Grade finish looks great as is, or customized to match any boat.

Stock Colors: Carolina Blue, Sand, Sea Foam, Sky White, Carbon Grey

88" GAMMA

The 88" GAMMA top features state of the art injection technology never before used in the marine industry. It is a great alternative to traditional fiberglass because of its lightweight, sturdy construction. It requires less tower components making it also competitive with canvas. A front EBOX option is available (see photo below) which can accommodate speakers and an EBOX door.

Six gas channels run through each 88" GAMMA top (pictured above). This provides strength and rigidity while reducing overall weight.

88" GAMMA Specifications:
Measurements: 88" x 64" x 1/4"
Weight: 42 lbs
Material: 1/4" LG ABS Polymer
Color: Soft White
