Product description

Product Description

The Stanley TimerMax Digislim, indoor digital bar timer 2 pack, turns electrical devices ON/OFF automatically. The program repeats daily and has a polarized outlet and a LCD screen with visual indicators. The slim design does not block a second outlet and it will help save money and energy--in the OFF position, the timer cuts power to the device, eliminating wasteful standby power. This timer is very easy to activate. Just plug the timer into the wall for an hour, remove the timer, hit the reset button and the battery will be activated. Rated 120V/5A/600W.

From the Manufacturer

This Stanley Indoor TimerMax Digislim Daily digital lamp timer 2 pack turns electrical devises ON/OFF automatically. The program repeats daily and has a polarized outlet and a LCD screen with visual indicators. The slim design does not block a second outlet and it will help save money and energy--in the OFF position, the timer cuts power to the device, eliminating wasteful standby power. This timer is very easy to activate. Just plug the timer into the wall for an hour, remove the timer, hit the reset button and the battery will be activated.

Question: Instructions for programming the unit

6 votes

Answer: Plug the unit into an outlet. You should see the display come on in just a few seconds.
Set current time, power ON time and power OFF time. (See instructions below.)
Allow unit to stay plugged in for a couple hours to charge.... see more
By Anthony G. on November 21, 2013

Question: what kind of bulb?

2 votes

Answer: The bulb type doesn't matter. However, I'd recommend a different brand. One of the two in the package didn't work at all (the time repeatedly reset itself). Another important note, the plug is only two prong and will not accept a grounded plug, if that matters to you.

★☆☆☆☆ **It was fun to me to find out the quality of the ...**

January 1, 2018

Verified Purchase

Failure rate is 50%. le;one of them did not work from the day one. I could return it but it made me wondered what is going on inside. So I opened it.

Here are the problems:
1). The screw to hold a 110V plug to the case is too tight so that plastic casing was cracked.
2). The 110V switch outlet screw was too tight and damaged the other end of the plastic that support 110V outlet plug casing.
By the way you must take off the 1/4 round plastic filler at the switched outlet then unscrew first to open the case.
3). The connector to the display wire was not connected at PCB. 3 wires and one of them was not connected.
4). The battery was not soldered to PCB. The terminal was floating.

I fixed all (sort of) with glue and re-soldering. I am an hobbyist and I have tools. It was fun to me to find out the quality of the assemble workers now-a-day but I do not recommend to open it.
Just return if you have non functional unit.

★★★★★ **Another homerun! Exactly what I wanted.**

September 19, 2009

Verified Purchase

I've had such a hard time finding a timer that will fit my outlet because I have a gigantic transformer plug plugged into the bottom socket and it cannot be moved. I searched and searched for something that could be used on the top socket in the small amount of space available above the huge transformer plug. This fit the bill perfectly! It takes up so little space for a timer. This has got to be the smallest timer I've seen.

I love that it has it's own batteries to keep time. We lose power a lot where I live and it is a pain to have to update all my mechanical timers after going without power. I'm sure I'll have no problems with this, but if I do, I will come

all my mechanical timers after going without power. I'm sure I'll have no problems with this, but if I do, I will come back to update. I'm also interested to see how long the batteries last for keeping time. They appear to be calculator-type batteries, so I'm sure they are inexpensive.

I love that it has an override "on" switch. There is no override "off" but I would never use it anyway. This only offers ONE on/off set of times, so if you need something to turn on/off more than once a day, this won't work for you. Also, this will only accommodate a 2 prong plug.

Overall, I thought this 2-pack was incredibly affordable and I'm completely happy with this product. I am buying

★★★☆☆ **Declining quality**
September 8, 2015
Verified Purchase

Update: I contacted the Stanley customer service line, and the gentleman that I spoke to was very helpful and responsive. Even though we couldn't fix the problem, they sent me a new set of Stanley TimerMax Digital Timers to replace the broken ones I had received. The new ones work like a charm. It's unfortunate that I had to go through the hassle of calling the company, but I'm glad the issue is resolved. I'm upgrading my review from one to three stars.

Original Review: I bought a set of these two years ago, and they are amazing - easy to program, consistent, and I love that you don't have to reset them if the power goes out. After moving into a new house, I decided to purchase another set. Although these are the exact same model from two years ago, the quality has completely declined. First, one of the timers doesn't keep time! I couldn't quite figure out why my lights were turning on and off during random times, until I watched the clock on the timer. Every 20 seconds or so, the minute would change. So essentially, the program would run 3 times per day. I pitched that timer. The second timer seems to work, but the buttons are so "soft" that, in order to program the unit, you end up smashing the Hour/Min buttons into the cutouts (where they get stuck). I had to use a paperclip to get them unjammed. Two years ago, I would have told you that these are the best timers out there, but now, I would recommend finding a different brand.

★☆☆☆☆ **Exploded battery!**
December 15, 2015
Verified Purchase

Bought min in 2011, had one in a drawer, figured I'd use it on my son's mini Christmas tree. Plugged it in, was setting the time and as I turned it over, the battery come out of the compartment and fell into the internals. Exploded the battery and fried the timer. Even tripped the circuit breaker in my son's room. Extremely poor design!

⭐☆☆☆☆ **Turn Back, it's a Trap!**

July 15, 2014

Verified Purchase

Well, the package of two did arrive as promised. I was surprised that when I had charged them and reset as told that one of them did not demonstrate any signs of life. The other seemed OK and allowed the setting of time and the on-off schedule. I put it in place right away and for two days it worked as it should. The third day the lights began coming on off schedule and the timer had lost its time. Now it doesn't show any time at all no matter what i do to it. It has fundamentally died and that after only two days.

So, I began to work on the body of the second one. After taking the cover off and looking for anything that could be out of order I put it back and, to my surprise, it started working. So, I am trying the second one in the same outlet controlling the same lamp. There isn't a lot of reason to think this will work any longer than the first one especially after this one had arrived dead in the original package.

This is a terrible product!

Gymboss miniMAX Interval Timer and Stopwatch - Green/Yellow SOFTCOAT

by Gymboss

★★★☆☆   35 ratings

Price: **$24.95** + $2.95 shipping

Your cost could be $14.95. Eligible customers get a $10 bonus when reloading $100.

Note: Not eligible for Amazon Prime.

- The miniMAX is an advanced model, designed for timing extremely complex interval programs consisting of more than 2 different intervals. If your program only has 1 or 2 different intervals you DO NOT NEED THIS MODEL. Due to the nature of complex intervals this timer is harder to setup than the Classic or Plus model Gymboss and requires more patience to learn how to use it. If you do purchase this model, we do have printable, expanded instructions on our website help page.
- Compact, advanced interval timer tracks up to 25 different intervals between two seconds and 99 minutes. Save up to 20 programs.
- Built-in Stopwatch and Clock features. Secure and Removable Belt-clip included.
- Chime and vibration interval notification; alarm duration can be set for one, two, five, or nine seconds.
- Compact size powered by one AAA battery (not included); measures 2.25 by 1.75 by 0.5 inches (55mm X 44mm X 14mm). Sweat and impact resistant. For use with: HIIT, Cross Fit, Cardio, Weightlifting, Strength Training, Kettlebells, Body for Life, Running, Learn-to-Run, MMA, Boxing, Martial Arts and more.

⭐⭐⭐⭐☆ **Minimax versus Everlast**
July 26, 2015
Verified Purchase

I wanted a timer for crossfit, HIIT, and other workout timing for use at home. Digging through the reviews didn't help, except it seemed like a lot of people liked the miniMax or the Everlast Interval Training Round Timer. I have two workout locations so I bought both. Here's what I found out:
1. a. If you want to do clever combinations of intervals (e.g. 5 min work, 50 sec rest, 4 min work, 40 sec rest, 3 min work, 30 sec rest etc.) or b. If you have many interval combinations you want use (and store into memory) you need the miniMax timer.
BUT it is somewhat complex to program, there is no end of round warning beep (If you want to have a warning beep 10 sec before the end of a 1 min work interval you have to program it as a 50 sec interval followed by a 10 sec interval), the loudest beep setting is not as loud as I would like, and for a given program you can only have one beep sound (not distinct for warning or rest or whatever). In the middle of a workout this can get confusing.
2. a. If you only need one or two interval durations (For instance 20x 1 minute rounds, or 5 minute rounds with 1 minute rests between, or 20 sec on, 10 sec off Tabatas) you need the Everlast timer. and b. If you don't mind the lack of memory (it remembers the last settings you did but if you want to use other timings you have to punch them in each time you change them for a different workout), The Everlast is your best bet AND The Everlast has a distinct end-of-interval warning you can simply set to off or for 10 or 30 sec warning. It is simple to change

Infraredhead

⭐⭐☆☆☆ **Not for the electronic weak of heart**

April 9, 2015

Verified Purchase

I am able to program all of my digital watches and alarm clock and a myriad of other electronics in my house but the Gymboss made me want to punt it across the yard and yell obscenities. And this is coming from a peace loving hippie type. Whoever wrote the instructions should be fired. I read and re-read the instructions then I watched Youtube videos on how to program it but to no avail. I ended up buying a much more simple timer on Amazon that was a thousand times more intuitive. I can do without the bells and whistles and refuse to waste any more time on something that I find maddening. I would like to say that the seller was phenomenal and quite accommodating. I would give them two thumbs up for their customer service. More power to you for those that had success figuring out this obnoxious little box that drove me absolutely batty the better part of a Sunday morning.

⭐⭐⭐⭐⭐ **Best Yet**

March 1, 2014

Verified Purchase

I should start by saying that I've had multiple gymbosses and have found the past models to be terrible. they weren't sweatproof, the buttons were horribly tight and always hurt my fingers to program, they were chunky, i just disliked them. And I kept replacing them after they broke hoping that the next one would be the one to make it past 2 weeks (I know, bad life choices)! Finally, having learned my lesson (I'm a tough study, it took 3 tries), I decided I would use my iphone, but that's tiresome for a number of reasons (eg I listen to music so I have to keep looking at my phone for the interval change since I can't hear it, it sucks up iphone battery to have a timer constantly running, and it's cumbersome when running outside). So I gave in and decided to give this latest model a try, bc I really missed having a real deal interval timer. Boy am I glad I did; here are the highlights:

1)Sweatproof: I sweat like nobody's business when I run (thanks pre-workout!), I know, super charming. But the fact of the matter is, so do a lot of you, so you're gonna want something that doesnt go wonky or all out break when exposed to your workout wetness. I keep this clipped to my tank strap and facing my shoulder, so it's practically marinating (again, totally charming, I know) and it's held up perfectly. And as an aside, I use it 5-6x/week and 30min-90min/time.

★★☆☆☆ **Less features than the FREE iPhone app**

September 2, 2015

Verified Purchase

The Gymboss has the basic functions of a stopwatch plus intervals. It is NOT worth $30, though. I have been using the Much less expensive app on my iPhone, but wanted to try because I thought it would be more convenient than the phone.

Pros: It saves your timers/intervals

Cons:
1. You have to press the start button 3 times to pause (that's just nonsense)
2. No countdown option to add before the actual interval session begins (VERY important for personal trainers when timing a warm-up)
2. It offers only one sound option
3. No 3 second warning option to allow the user to know the interval is about to end.

All of the Cons listed are available on the iPhone App, and are very handy during running / training / group instruction. If you don't need these features, and want a small portable device, then this product is for you.

Jonathan Dowling

★★★★★ **Great training partner in the Gym!**

April 3, 2016

Verified Purchase

The Gymboss miniMAX is a great tool for me in the gym. I love it so much that I have two. I like how my custom intervals are stored in the memory so that I don't need to set it each time I workout.

Now Gymboss has a basic app for the iPhone. The app works great too, but I rather use the gymboss timer so that I don't need to bring my phone when I workout.

SHOTMAXX-2 Watch Timer

★★★★★ (19) | Manufacturers: Double-Alpha Academy

Description   Reviews

*** Effective immediately, all Shotmaxx-2 timers include a **"no questions asked" 3-year UNLIMITED warranty**. Whatever the issue you may experience – if you bought it within the last three years (proof of purchase required) you can send it back for an immediate replacement. ***

The Shotmaxx-2 is a exceptional shot timer offering unique capabilities – **and now backed up by the best warranty on the market!**

In late 2013 we launched the SHOTMAXX, which took the shooting world by storm. It was the first ever watch-size fully-functional Shot Timer, and it outperformed the hand-held timers in most categories. The light-weight watch allows shooter to train with the device on, without it interfering with their normal draw or gun handling. ROs can safely run the stage, while keeping both hands free to help or control the shooter if need be.

Three years of market feedback, and considerable investment in research and design, result in a product which takes the SHOTMAXX a huge leap forward - to the new SHOTMAXX-2.

While SHOTMAXX-2 utilizes the same watch housing and display as its predecessor, that is where the replication ends. The new SHOTMAXX-2 now has a larger strap add-on, housing a bigger, much louder and more robust speaker, which delivers a truly surprising

$14.95

While SHOTMAXX-2 utilizes the same watch housing and display as its predecessor, that is where the replication ends. The new SHOTMAXX-2 now has a larger strap add-on, housing a bigger, much louder and more robust speaker, which delivers a truly surprising volume from such a small package.

The battery capacity has been more than doubled, now offering enough battery life for several days of continuous use on the range. The battery readout system has been upgrade too, and shows a true and accurate battery level, based on real voltage measurements, and not a usage calculation.

String memory has been added in the SHOTMAXX-2. You can now scroll back and review 9 strings of 99 shots each which are stored in the device's memory.

Addition beep level and frequency options give you more control over the sound your timer makes when activated.

The unique shot detection, either by microphone or accelerometer sensors has been improved further, refining the shot-detection algorithms to ensure that every type of range, weapon and distance from shooter are well supported. The SHOTMAXX's extreme sensitivity is retained, allowing the SHOTMAXX-2 to function as the best Airsoft timer on the market as well!

Shoot on a busy range while wearing the SHOTMAXX-2 running in Accelerometer mode, and you will be able to pick up your shots ONLY. Other shots fired close by will not be recorded.

The Spy mode feature is retained, giving the option to activate the Timer off your first-hand motion at the start of a stage, and record all your split times as you shoot through. You can even set delays to compensate for your reaction time to the RO's beep.

There is, though, one feature which has been removed from the SHOTMAXX-2, and that is the Bluetooth capability. We decided not to include it in this model, as it was not a widely-used feature, and freeing up the BT components space allowed additional memory and other improvements.

Display: the black model has a black background and copper/gold digits and the white model has a white background with black digits.

Très pratique et efficace. Je regrette d'avoir pris l'écran noir moins visible que le blanc. Par contre l'interprétation du mode d'emploie est très ardu!

Rating: ★★★★☆ (4 of 5 Stars!)

Display: the black model has a black background and copper/gold digits and the white model has a white background with black digits.

Which display should I choose?

Well, first off, it's a personal preference. Some really like the slick and more modern appearance of the gold characters on black, which mergers nicely into the color of the watch's frame and strap. Both types, of course, offer the exact same features and both are clear and easy to read in bright sunlight. However, if you plan to use it indoors, or in low light condition, you may find the white display offers better contrast and an easier display to read in poor light.
