[Ask a question](#)

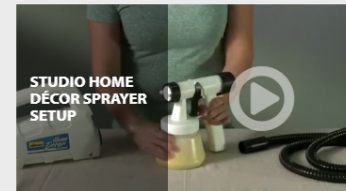

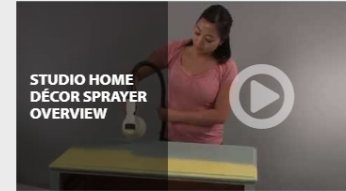

The Studio Home Décor sprayer quickly completes craft and upcycling projects with no brush strokes and less paint.

The lightweight and versatile system works with chalk type, milk and most other decorative paints.

Paint spray control comes from adjustable patterns and material flow to provide great results right from the first use.

## VIDEOS

[VIEW MORE](#)

## FEATURES

Sprays decorative paints such as chalk type and milk (thinning may be necessary). Also sprays specialty furniture/cabinet paints plus stains, sealers, and lacquers

It's easy to use, just fill and paint

Creates a smooth finish with no brush marks

Saves time versus hand painting

Features paint-saving controls such as the pattern adjustment dial and material flow control

Lightweight and easy to maneuver for small pieces and tight space spraying

6' air hose for additional maneuverability around painting projects

Small size for compact storage, but powerful enough to spray large sized projects

Worked great on the first half of the project.

It worked great on the first half of the project. When I needed to complete the project it began clogging (yes I was using thinned paint) it would stop spraying paint and air just came out.. then all of the sudden a lot of paint would come out. HUGE MESS! Paint sprayed on the piece and floor.. I took the entire thing apart cleaned it and checked all the seals (yes they're intact) put it back together and the only way I can get paint to come out is to hold my hand over the end (sprayer part) until it eventually comes out in my hand then begin spraying my piece. Total mess.. and the finish isn't great. Going to sand it down and buy a new sprayer and start over. I would recommend this product as a one time use product or disposable. Plan on throwing it away after about 5 hours worth of use..

I'm sorry to hear that you are having difficulty with your Home Décor sprayer. It sounds like the problem could be with the breather hole in the suction tube. This is a small pinhole that goes into the side of the suction tube, just below the foam sealing disk. The exact location is shown in the manual on page 7, in section 2. If paint is plugging that hole, the unit will not be able to feed paint to the nozzle or it may barely spray paint. You should also check the air valve, just below the clear tube on the side of the nozzle. If you remove the tube and then unscrew the fitting at the base that it attaches to, there will be a little blue diaphragm inside of it. There should be no paint inside of that fitting, on or around the valve, or inside the base where the fitting screws on. Feel free to give us a call at 1-800-328-8251 if you still have issues and we will assist you.

Great little sprayer!

We've had this for about a year and it's worked wonderfully. It's been on the shelf for about two months now and while putting it together to do another batch of bookends, I find that I can't get the connecting nut to screw on. It seems as if the sprayer has shrunk or the nut has gotten bigger. It simply goes right over the sprayer threads and won't thread at all. It's like it's 1/16th of an inch too large now. Everything else fits fine and all of the parts are there. Any thoughts?

**Alot of work!**

I have a headboard I am train to paint using the Wagner home decor paint sprayer. I could've painted this by hand five times by now because this machine continually clogs. I have taken it apart multiple times can't find any reason why it doesn't work it just won't spray the paint. I have tried everything it says in the manual and it still does not work properly . I have never been so frustrated and wasted so much time on a product that was supposed to decrease the time needed to paint the project. What a waste of \$80 ..

**Used 1 time!!**

Absolutely love my results but after I cleaned it I have lost the seal for the inside and now it only pushes out air and a lot of paint and I don't see where to purchase this piece?? Any advice???

**fast but not a great finish**

The finish this thing provides looks more like a roller than a sprayer.

There are a few tricks to help improve your finish results with latex paint (I'm guessing). Thin it 10% with water and add 1 ounce of flow agent per sprayer cup of paint. Spray a wet coat from 6" from the project. Adjust the sprayer for zero spit. Spit happens when too much paint is coming out of the sprayer, reduce paint flow to reduce spit. Lay the project down so that gravity helps you level the paint for a better finish. For more tips and tricks call us at 800-328-8251.

**Wish it would work better as advertised**

I tried using it a dozen times or so with my chalk type paints. It seems to me you have to water down paint so it would spray for one. Which makes using chalk paint less effective in my opinion. I love chalk paint as it's thick, and fills in scratches etc on whatever your painting. So needing to water down to use the sprayer defeats the purpose of chalk paint!

I played with the adjustable nozzle trying to get a good finish. I tried to love it but just kept clogging, or splattered finish. I've cleaned it properly, and made sure to follow steps.

Not happy...

Sorry to hear about your experience with the Home Décor sprayer. Because of the thickness of the chalk paint normally 10-20% thinning is required to get the desired finish. We have had many other customers use this sprayer and have been quite happy with the results. I hope with this knowledge you may give it another shot and if you have any questions or need please reach out to our technical support staff at 1(800)328-8251.

**I am a do-it yourself craft kind of girl**

I purchased the sprayer 2 weeks ago and painted 20 kitchen doors in less than 1 hour... They really look great. I will never paint furniture or cabinets with a paint brush or a roller again. OMG LOVE this product

**Eady to use**

I love this sprayer it's so easy to use. Works great and easy clean up. I've had it about 1 1/2 years now. I've even sprayed my daughters exterior rock on her house with it. Fun to use. I just want to paint everyday with it.
