

ProgressiveHealth's Comprehensive, Integrated Model

Resulting in shared information, KPIs, tracking, predictive outcomes and continuous improvement

Physical Demand Analysis	Analyzes the work site at the process level, applying both proprietary approaches and industry accepted methods. The results are formulated into a compliant functional job description.
Post-offer Testing	A battery of functional tests is prescribed based on the demands at the job site. Data entered into ProgressiveHealth's proprietary software PHLive recommends candidates optimally placed into jobs based on results.
Optimal Placement SM	Through the use of PHLive, we help avoid injury costs by mitigating the chances that you "hire an injury" and ensuring that new hires and those returning from injury are recommended for optimal placement.
Work Conditioning / Fitness	Specialists develop customized conditioning programs to better prepare new hires for the work environment or assist in returning injured workers back to the job safely and quickly.
Proactive Prevention SM	The intent is to discover unreported and unobserved difficulties/ discomfort related to job performance. Specialists will design countermeasures to address the situation.
Situation Investigation Intervention Mgmt SM	Specialists investigate difficulties in the work process, determine the root cause of the issue, and develop countermeasures to address it. Incidents are recorded in PHLive to monitor and trend and for reporting.
Restrictions Management	PHLive allows for direct input of physician restrictions, layering those restrictions onto the job requirements. It determines, based on these restrictions, the identified and validated job requirements.
Rehab	Certified staff provide appropriate rehabilitation to injured workers onsite.
Onsite / Near-site Medical	Providing a convenient access point for employees to seek their occupational and, if desired, primary care needs, while reducing their time away from work, has been seen as a significant employee benefit.
Health Improvement	ProgressiveHealth specialists actively engage the workforce, administering active, accountable Health Improvement, realizing real, tangible results where passive wellness activities have failed.
Virtual Prevention SM and Health	Specialists will continuously provide early situation investigation and intervention, education, and outreach to all off-site locations.

Partnering with **world-class leaders** in a variety of settings to **reduce** the number of workplace injuries and **lower** total injury related costs, while **enhancing** productivity, **increasing** employee morale, and helping **build** an overall **healthier team**.

Industrial Solutions

ProgressiveHealth's Comprehensive, Integrated Solutions for:

-  Placement
-  Prevention
-  Health Improvement
-  Medical

150 N. Rosenberger Ave. • Evansville, IN 47712 • USA
(812) 491-3856, ext. 257

We partner with industry-leading clients nationwide reducing costs, delivering superior patient care, improving outcomes, and crafting client-specific, value-added solutions.

ProgressiveHealth is the premier provider of a broad spectrum of placement, injury prevention, health improvement, onsite medical and rehabilitation management solutions.

The integrated mix of people, programs, processes, and protocols, addressing both workers' comp and group health aspects, adds significantly more value than a piece-meal approach.

A comprehensive, integrated program is the best approach.

We recognize that some employers have introduced select measures to address individual aspects of the challenges they face in maintaining employee health and safety – perhaps a basic pre-employment screen, or standard insurance carrier wellness promotions, for instance. These programs are likely better than nothing, but we have found a comprehensive, integrated program is unquestionably the best approach to deliver the most profoundly positive results. Because you may have introduced elements with which you may be pleased, but also understanding the synergies yielded by an integrated approach, we have developed our solution set as a “meta-solution” – maintaining, administering, or incorporating the best of what you already may have, supplementing what may need improvement, and introducing best practices to fill in the remaining gaps.

Client Industries

Automotive

Aviation

Energy

Plastics

Metals/Materials

Logistics

Nutrition

Manufacturing

With over 900 employees providing services across 14 states –

including Athletic Trainers, Exercise Physiologists, Ergonomic Specialists, Physical Therapists, Occupational Therapists, Nurses, Nurse Practitioners, Doctors and other Allied Health Professionals –

dedicated solely to prevention, rehabilitation, medical and health improvement, we have the capacity, expertise and focus to get the job done right.

Experience

We view the world through the operational lens of our client partners. In this spirit, every touch is an opportunity to not only improve the immediate state of health of the employee, but to progress that employee along a healthier, happier, more productive path. Moreover, the data obtained from multiple types of interactions can yield valuable business intelligence insights from which better decisions can be made with respect to deploying human resources or expanding or modifying solution elements.

We apply, in both our clinical solutions and business philosophy, proven, evidence-based best practices. We strive for continuous improvement by monitoring KPIs, derived from our clients' own KPIs and industry best practices, which cascade throughout our entire organization. This accountable management ensures that the right people are in the right places at the right times, doing the right things, which, in turn, ensures that are clients are realizing the optimal return on investment for the human resources deployed.

A Variety of Settings and Solutions

Automotive

We have provided service since 2000. Our team of specialists perform post-offer testing, new hire work conditioning, Optimal PlacementSM, Proactive PreventionSM (including Early and Advanced Intervention, Situation Investigation Intervention ManagementSM, and Acute Injury Management), restrictions management and RTW conditioning, and data reporting through ProgressiveHealthLIVESM to their team of over 6,000 team members.

Aviation

Since 2006, we have managed onsite occupational / non-occupational, acute care and emergency services for one of the largest airlines in the world. At their largest hub and most operationally complex, we deliver 24/7 coverage to over 7,000 team members, including providing Virtual PreventionSM to support multiple, large airport outstations. We provide service to multiple divisions including Airport Customer Service, Technical Operations, In Flight and Cargo.

Nutrition

Our team of three specialists provide management over the medical clinic, plant and fitness center and the overall healthcare needs of this nutritional company with approximately 800 office and plant employees. This includes Proactive PreventionSM solutions for the plant, ergonomic assessments for the office, and instruction and guidance for the employee fitness center. This team works cohesively to promote health improvement initiatives and safety.

Manufacturing

We lead a comprehensive, integrated team of 30 healthcare professionals, including medical (physicians, NPs, and MAs), emergency medical response (paramedics and EMTs), and early intervention (Athletic Trainers and Exercise Science). Services include early discomfort management, ergonomic education, recognition, evaluation and treatment of occupational injuries, medical surveillance, drug screenings, health screenings, vaccine administration, seasonal wellness and emergency response.
