

## How It Works

Open your patient's intra-oral scan directly in uLab software. Program the desired treatment plan, which can include clear aligners in as little as 10 minutes. Design your patient's aligners and fabricate them with many of the 3D printers on the market. Our automated uContour machine will process (cut and initial polish) your 3D model with precision in about a minute. Create a seamless patient experience by custom-branding your aligners with the name of your practice.

HOW WE WORK WITH YOU

# uContour

First of its kind, automated solution

Aligner trimming in under a minute

You choose a straight or scalloped cut

Designed by uLab

▶ 6:18 / 8:00

▶ 7:12 / 8:00

uContour

Automatically trims aligners in less than a minute
