This is very interesting to me but one thing Jumbo should do is if they make any sort of configuration changes to Google or Facebook what breaks because of those changes should also be outlined. I opted to have Goggle settings changes knowing what switch it was going to turn off "web app & activity"...

April 05, 2019

Jumbo, your Privacy Assistant, launches today.

Today, I'm excited to announce our new app: **Jumbo**. Jumbo is a beautifully designed iPhone app that helps fix the privacy mess. Unfortunately, every day it feels like there is a new story about our personal data being compromised. But the good news is that people increasingly care about protecting their privacy. In fact, I believe privacy is a human right. But our privacy can only be protected when great tools are designed with people in mind, and make this complex issue as simple as tapping a button. That's what why we built Jumbo.

You can download the app for [iOS today](#). We will be working on an Android version in the coming months (follow [@jumboprivacy](#) on Twitter to know when the Android beta will be available).

--- [Pierre Valade](#), CEO of Jumbo. Previously: CEO of Sunrise Calendar, acquired by Microsoft.

What Jumbo will do for you?

Make your tweets ephemeral

Social media platforms like Twitter were built to emulate real-life communication – where the things you say aren't recorded permanently, only to be resurrected later, out of context. Today, millions of people want to enjoy the freedom of social media expression without the downside of creating an endless trail of thoughts and feelings, that will follow them forever.

That's why we've built the easiest way to make your tweets ephemeral – meaning they exist online for a time period you choose, then Jumbo removes them from the internet to save on your iPhone, for only you to come back to.

The Twitter Cleaner on Jumbo deletes old tweets from Twitter, then privately backs them up in a beautiful user-interface, accessible only by you, on your Jumbo app. It's like a Twitter vault, and only you have the key.

Smart Privacy, for Facebook

Another complaint we frequently hear is how difficult and confusing it is to modify Facebook privacy settings – there are more than 30 settings available!

That's why we've built our Smart Facebook Privacy Settings feature, which represents our aspiration to become an integrated, one-stop shop for all your privacy needs. Helping you not only clean your digital data, but protect yourself with best practices moving forward.

Select the privacy level you're comfortable with – strong, medium, or weak – and Jumbo changes more than 30 settings for you automatically. [You can learn more specifically about this feature on this page.](#)

Delete your Google Search, Alexa voice recordings

Jumbo also supports Google Search, and Alexa. For Google, did you know they save every search you've ever done – all of those intimate, private questions you asked are saved on the internet for ever. But with Jumbo you can clean these old searches that Google keeps (we recommend that you use [DuckDuckGo](#) if you do not want to be tracked when searching online). With Alexa, Amazon is storing all the voice recordings of your requests – and they do not even let you turn off that collection of data. With Jumbo, you can clean all your Alexa voice recording in one tap!

Should I trust Jumbo?

Good question! Trust is a foundation of what we do. I think trust is only earned over time, and I hope Jumbo will prove to you that every decision we are making has your privacy in mind. We aim to be the trusted brand when it comes to protecting your privacy.

The first decision we made while building Jumbo is, unlike other internet services, we do not have any server-side storage ("in the cloud") or processing of your data (we cannot see anything we clean for you). All your data never leaves your iPhone, and is never stored or processed in a remote server (of course, except the server of the original service, like Facebook's servers). [You can learn more about security on this page.](#) In the future, we will support backups to your personal iCloud or Dropbox accounts, only if you want to.

Second, I think knowing who is behind a product is an important factor in trust. Jumbo is built by a team of 6 people, the CEO is Pierre Valade, and the investors are [Thrive Capital](#) and [Nextview Ventures](#).

How does Jumbo plan to make money?

We want to build Jumbo as a sustainable business – one that does not violate your privacy – so we're planning to introduce premium features, that will be accessible via a subscription, in the coming months.

Ask us more questions on Twitter at [@jumboprivacy](#), or via email at support@jumboprivacy.com

New privacy assistant Jumbo fixes your Facebook & Twitter settings

Josh Constine @joshconstine / 12:09 pm EDT • April 9, 2019

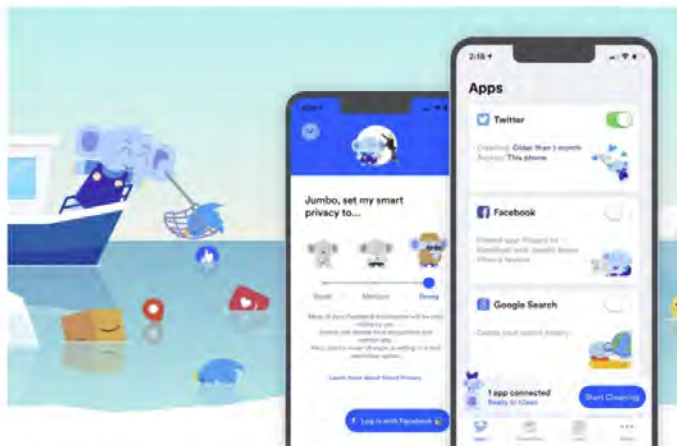

Comment

Jumbo could be a nightmare for the tech giants, but a savior for the victims of their shady privacy practices.

Jumbo saves you hours as well as embarrassment by automatically adjusting 30 Facebook privacy settings to give you more protection, and by deleting your old tweets after saving them to your phone. It can even erase your Google Search and Amazon Alexa history, with clean-up features for Instagram and Tinder in the works.

The startup emerges from stealth today to launch its Jumbo privacy assistant app on iPhone (Android coming soon). What could take a ton of time and research to do manually can be properly handled by Jumbo with a few taps.

The question is whether tech's biggest companies will allow Jumbo to operate, or squash its access. Facebook, Twitter and the rest really should have built features like Jumbo's themselves or made them easier to use, since they could boost

For example, Jumbo can change who can look you up using your phone number to Strong – Friends only, Medium – Friends of friends, or Weak – Jumbo doesn't change the setting. Sometimes it takes a stronger stance. For the ability to show you ads based on contact info that advertisers have uploaded, both the Strong and Medium settings hide all ads of this type, while Weak keeps the setting as is.

The full list of what Jumbo can adjust includes Who can see your future posts?, Who can see the people?, Pages and lists you follow, Who can see your friends list?, Who can see your sexual preference?, Do you want Facebook to be able to recognize you in photos and videos?, Who can post on your timeline?, and Review tags people add to your posts the tags appear on Facebook? The full list can be found here.

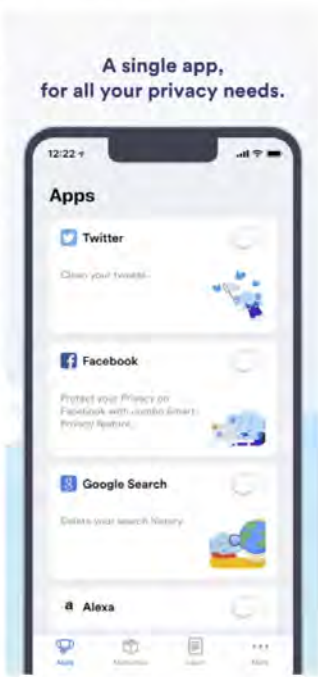

For Twitter, you can choose if you want to remove all tweets ever, or that are older than a day, week, month (recommended), or three months. Jumbo never sees the data, as everything is processed locally on your phone. Before deleting the tweets, it archives them to a Memories tab of its app. Unfortunately, there's currently no way to export the tweets from there, but Jumbo is building Dropbox and iCloud connectivity soon, which will work retroactively to download your tweets. Twitter's API limits mean it can only erase 3,200 tweets of yours every few days, so prolific tweeters may require several rounds.

Its other integrations are more straightforward. On Google, it deletes your search history. For Alexa, it deletes the voice recordings stored by Amazon. Next it wants to build a way to clean out your old Instagram photos and videos, and your old Tinder matches and chat threads.

Across the board, Jumbo is designed to never see any of your data. "There isn't a server-side component that we own that processes your data in the cloud," Valade says. Instead, everything is processed locally on your phone. That means, in theory, you don't have to trust Jumbo with your data, just to properly alter what's out there. The startup plans to open source some of its stack to prove it isn't spying on you.

While there are other apps that can clean your tweets, nothing else is designed to be a full-fledged privacy assistant. Perhaps it's a bit of idealism to think these tech giants will permit Jumbo to run as intended. Valade says he hopes if there's enough user support, the privacy backlash would be too big if the tech giants blocked Jumbo. "If the social network blocks us, we will disable the integration in Jumbo until we can find a solution to make them work again."

But even if it does get nixed by the platforms, Jumbo will have started a crucial conversation about how privacy should be handled offline. We've left control over privacy defaults to companies that earn money when we're less protected. Now it's time for that control to shift to the hands of the user.

clear professional rules for how these companies represent us and prove their trustworthiness.

I don't know exactly how this will evolve. But we're more likely to win when there are laws that stop data collection from being a secret — and when we have companies fighting to protect our privacy, not just exploit it.

Three Things To Consider In The 2020 Cybersecurity Landscape

Paul Lipman Forbes Councils Member
Forbes Technology Council COUNCIL POST | Paid Program
Innovation

POST WRITTEN BY

Paul Lipman

Paul Lipman has worked in the cyber world for over a decade, and is currently CEO of **ButtGuard**, a global leader in smart home cybersecurity.

Photo: GETTY

2019 was a tumultuous year for cybersecurity and privacy, from the WhatsApp hack that injected spyware onto consumer devices to repeated Facebook privacy breaches, GDPR, the rise of cyberattacks against small to midsize businesses (SMBs) and small cities, and more.

Large and small companies are reevaluating data privacy and security as a result, learning from past lessons as they seek to pinpoint where future cybersecurity threats exist. In equal measure, many companies are turning to technologies like AI and machine learning to play an even larger role in threat detection.

The past year also saw the rise of — and the race to jump on — the “privacy bandwagon.” Companies like Facebook and Apple have discussed the importance of putting privacy first, but reports of leaks and breaches have called that into question. Consumers today are more aware of privacy breaches and misuse of their data, and they’re more skeptical of tech companies that claim they protect and value their users’ privacy but don’t “walk their talk.”

With the new year upon us, here are three things to consider in the cybersecurity landscape:

The Rise Of The Machine

Machine learning (ML) is poised for a greater role in 2020. Investment in the technology is brisk: According to estimates published by IDC, the three largest use cases for AI, including threat intelligence, will make up roughly 30% of total AI spending in 2020. ML will take center stage given its ability to analyze patterns and use findings to prevent future attacks.

AWS Data Integration Tool

Develop Big Data, Real-Time Analytics & ETL Projects On AWS Using Talend. Free Handbook.

Talend

Talend

Talend

Talend

ML also reduces the time organizations spend on routine tasks, enabling resources to be reallocated elsewhere.

PROMOTED

A perennial in cybersecurity, supervised AI algorithms will continue to play a critical role. Unsupervised deep learning models will also play a key role, extracting and learning from patterns in existing corpora of known good and bad files to detect and eliminate threats. These algorithms will search for and scour new and unfamiliar files — such as zero-day threats — and score their risk.

Cybersecurity firms on the cutting edge will also use unsupervised ML models to identify feature sets and parameter models based on unlabeled collections of data in order to uncover hidden patterns and unique approaches to identifying threats. This will result in the meaningful progression in the usage of unsupervised deep learning models, which extend to become the most advanced level in threat detection and amelioration.

It will be paramount to respond to threats quickly in 2020 as opposed to the antiquated pattern of identifying a suspicious file, uploading it to the cloud and reviewing it. Companies are instead turning to ML models that run not only in the cloud, but also at the endpoint to identify and address threats in real time in the race to keep pace with the cyberthreat landscape's evolution.

Small Businesses Wake Up To Increased Cyberattacks

The escalation of cyberattacks against small businesses in 2020 will demand they implement much more stringent and disciplined cybersecurity defenses. Hackers are opportunistic, and SMBs fare even worse at their hands, as hackers see them as much easier prey than large enterprises.

Ransomware will continue to be the primary risk for SMBs. The increasing sophistication and decreasing cost of "ransomware as a service" will enable hackers to execute attacks with impunity. Expect to see ransomware become more sophisticated in terms of contextual ransoms — adjusting the ransom demand through the automated determination of the ransomee's industry, size and ability to pay.

Additionally, hackers will try to gain access to SMB networks and more lucrative data and information such as banking information, payroll details and client details — all of which provide access to more extensive company networks. Once hackers have access to information, how they manipulate and use it will be endlessly creative, whether it be blackmail attacks, phishing scams or more "advanced" attacks that use information as a springboard for accessing supplier/client networks.

Small businesses that believe antivirus software on endpoint devices is sufficient will also be at risk if they fail to religiously apply upgrades, which are critical to nullify zero-day threats, quarantine infected devices and proactively monitor for breaches.

Private Is As Privacy Does

Privacy will continue to be a hot-button issue in 2020. The rise of the internet and social media came at a high price: privacy. Tech companies will continue to push consumer privacy boundaries as they collect, use and sell consumer data, but new companies built with privacy by design, such as Brave, FigLeaf and Jumbo, will also rise to give consumers the choice to be private.

The concept of data minimalism will gain more ground in 2020. It's a simple philosophy: Companies collect only the data necessary to provide products and services, and they are transparent about it with the consumers who share their data. It's a matter of trust, and it's imperative to address rising privacy and security concerns among consumers.

Company Data on The Dark Web?

Tectum Labs

Prometheum

Stabilizing the disruption

Learn before you Invest

The Blockchain Securities Knowledge Center

The Blockchain Securities Knowledge Center

We'll begin to see meaningful engagement on the concept of data minimalism within the industry in 2020. However, don't expect to see major steps taken toward implementing solutions for at least another couple of years. Unfortunately, inertia remains a powerful impediment to change.

Legislation has a role to play as well. Laws that aim to redress the online privacy balance by hanging the Sword of Damocles over organizations that don't tighten up cybersecurity will proliferate. The California Consumer Privacy Act (CCPA) becomes law in January 2020 and will rival GDPR in terms of the stringent demands it places on organizations.

Consumers will also have a role to play due to the rising tide of distrust in big tech companies. In the wake of the vast number of breaches, I believe 2020 will see more consumers use VPNs and secure browsers to keep their browsing habits private and data protected when online.

The stories about breaches are cause for concern. However, there's also room for optimism. Consumers will continue to voice their support for additional privacy measures, keeping big companies honest, and the "privacy-first" discussions from companies like Apple and Facebook are encouraging to hear. The confluence of public pressure and private self-interest will undoubtedly help to improve the ever-evolving cybersecurity landscape as we enter the new year.

This new app manages your privacy for you, from Facebook to Alexa

Jumbo is like a concierge for privacy, cleaning out your old data and maintaining your privacy settings across your accounts and apps.

[Image: courtesy Jumbo]

BY KATHARINE SCHWAB 5 MINUTE READ

In theory, most people care about their privacy online. But controlling it is another matter entirely, since your data is spread out across every account you sign up for, and even some that you don't. Often the only means to protect yourself is to painstakingly change each privacy setting for dozens if not hundreds of accounts—the average person has 191 accounts to keep track of—which quickly becomes overwhelming.

A new app called Jumbo is aiming to solve privacy's biggest design problem by providing a single, simple interface that gives you an easy way to access your settings from one place. Right now, the app can set your Facebook settings to the most private possible version, delete old Tweets, clear your Google search history regularly, and clean out all of the voice recordings Amazon has stored based on your interactions with Alexa. This summer, Jumbo will also offer the ability to set your Twitter, Google, and Amazon accounts to the most private settings possible, all from within the app. A feature that can clean out old posts on your Facebook, Instagram, and Tinder accounts is coming soon.

All of these features are things that users can already do on their own, of course. But Jumbo's interface turns what was once an onerous user experience into something so simple it's delightful: The app's little elephant mascot mimes putting your boxed-up data into a moving truck as you wait for the app to clean your accounts and button up your privacy settings.

The elephant, says CEO Pierre Valade, is a metaphor he likes to use for the big tech companies: Facebook, Google, and Amazon are all like elephants that never forget anything you've done. In contrast, "Jumbo is this elephant who happens to have a bad memory," he says.

How to recharge your holiday party

Forget karaoke and ugly sweaters. Here's how to turn your end-of-year company party into an event that everyone will want to attend.

Once you download the app, you're prompted to input your username and password for each of the services you want Jumbo to deal with on your behalf. As someone who cares about privacy, that instantly made me nervous: Did that mean the company has access to all my accounts as a result? But as Valade explains, all the processing happens on your phone—that means that all the data, including your passwords, stays on your phone and never communicates with a server. Jumbo doesn't even ask you to make an account. Valade says Jumbo doesn't have a database of users, and only tracks people's behavior within the app, like what time people open it and which features they use—not who they are—to understand how people are using it. However, he also recognizes that gaining users' trust will take time. He plans to ask independent auditors to verify that Jumbo does all its data processing on people's phones without the use of servers.

After learning that my data wouldn't be sent to the cloud, I entered in my credentials for Google, Amazon, and Facebook. Within a minute or so, the Jumbo app had cleaned out these accounts and ensured my Facebook privacy settings were up to snuff. I double-checked my Amazon account after to ensure that it had worked. It had: All my Alexa recordings had thankfully been deleted.

There are some challenges with running all the processing locally. At the moment, you have to keep the app open for it to work and users have to manually ask Jumbo to clean out their data again. But for Valade, these challenges are worth it. "I think privacy is often like that," he says. "It comes with a trade-off of user experience. When that's the case, we're always going to choose what will protect our user best."

Valade is an entrepreneur with a background in UX design who last built a calendar app called Sunrise, which Microsoft bought for \$100 million in 2015 and had millions of users (the company shuttered the app in 2016). Jumbo launched last week, and already has 40,000 users and dozens of glowing reviews in the App Store (as well as some users pointing out issues with how much time it takes to run the cleaning process). Currently it's only available on iOS, but an Android version is coming later this year.

Valade is hoping to further his user-first philosophy through different features in the app—like the "smart security" tool, which can change your Facebook settings for you. At the moment, the feature asks users if they want weak privacy, medium privacy, or strong privacy. "My assumption is that most people choose strong," Valade says. After

[Image: courtesy Jumbo]

some testing, he's thinking about removing the weak and medium options altogether. But he doesn't presume to know what privacy best practices are: He wants to bring advocacy groups into the decision-making process to ensure that Jumbo is making the most privacy-focused decisions on people's behalf.

Jumbo's business model isn't ad-based, unlike services like Unroll.me, which performed the useful service of unsubscribing you from mailing lists you don't interact with but then sold the information it found in your inbox. Instead, the company will run on a freemium subscription business model, where users or enterprises can pay for more advanced features. Valade aims to launch some of these paid features by the end of this year.

Ultimately, the goal is that people won't have to think about their privacy at all. Valade imagines that people may one day trust Jumbo with their email, and the company could look for accounts that could be cleaned up or made more private that way. He also sees Jumbo as a "GDPR assistant," referencing Europe's strict data privacy laws that include rights like the ability to request that a company delete all its data on you. Jumbo may also be able to send emails to companies on European users' behalf asking companies to delete their data, exercising this right to be forgotten.

Valade anticipates there might be some roadblocks with Facebook. "Do they want to help us do the right thing for users even if they're making less money per user?" he says. "Or do they want to make it as hard as they can, whether by making the user experience to change your settings even harder or trying to threaten us legally or whatever means they have? It's up to them."

However, he doesn't see Jumbo as anti-social media. Instead, he's hoping Jumbo will fix the problem of privacy settings. "I just want to make sure people have the right tools," Valade says. "If the services aren't building those, we're going to build that. We're going to make it easy and in one place so it's not annoying."

Jumbo is a powerful privacy assistant for iOS that cleans up your social profiles

39

Make your tweets ephemeral and your Facebook impenetrable

By Casey Newton | @CaseyNewton | Apr 9, 2019, 12:00pm EDT

f t r u SHARE

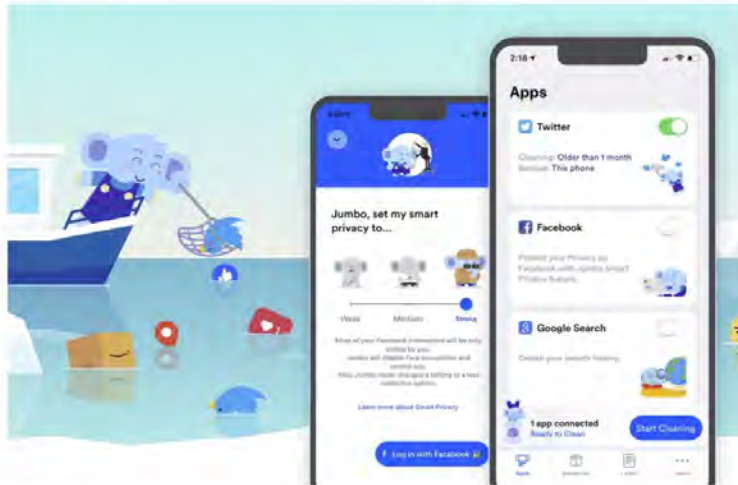

Image: Jumbo

Social apps have long provided privacy settings to help you manage who can see your posts. Yet, time and again, we find ourselves surprised to learn that we've given away more than we intended — whether it's a years-old tweet that lands us in hot water, a Facebook post we never intended our ex to see, or something even more serious. Jumbo, a new privacy assistant app for iOS, attempts to take the guesswork out of privacy settings. While the app is hindered significantly by restrictions from social media platforms, it could prove useful to anyone who wants to reduce the amount of data they have left around the social web.

Jumbo is the brainchild of Pierre Valade. He began working on the app after his previous company, [the social calendar app Sunrise](#), sold to Microsoft. "The climate around privacy changed completely last year," Valade tells *The Verge*. The [Cambridge Analytica data privacy scandal](#) brought new attention to the way that data given away years ago could come back to haunt us. Valade and his six-person team based in New York began developing an app they hope will come to feel like your digital lawyer, a "data fiduciary" that manages privacy settings on your behalf.

The result is Jumbo, [which is now available on iOS](#). (An Android version is forthcoming, [the company said in a blog post](#).) For starters, the app manages your privacy on four different services: Twitter, Facebook, Google search, and Amazon's Alexa. In the future, Jumbo plans to manage your privacy on Instagram and Tinder as well.

**A single app,
for all your privacy needs.**

**Clean old stuff,
save hours and feel better.**

As a frequent tweeter, I was most interested in Jumbo's Twitter cleaning service. Connect your account, and Jumbo will delete tweets on the time frame of your choosing. (I chose to let tweets expire after a month.) Your Twitter password is saved to the iOS keychain, not Jumbo itself — part of the company's effort to collect as little data about its customers as possible.

Tap a "start cleaning" button, and Jumbo will delete your tweets while moving them into an archive that's available inside the Jumbo app. The archive isn't particularly useful — at the moment, it has no search function, so you'll likely want to export your tweets to a desktop file as well — but it works well enough as a no-frills archive.

Due to restrictions with Twitter's API, Jumbo can only delete your last 3,200 tweets. (This is true of other tweet-deleting services as well.) The app also needs to remain in the foreground while it performs its cleaning. Switch to another app, and it may stop working. As a result, if you have tens of thousands of tweets, you'll need to go back and manually run the cleaning service every few days. Afterward, Twitter will start returning tweets beyond the 3,200 you just deleted so you can get rid of more. This is a recurring theme in Jumbo at launch: it's a great idea, but its user experience is marred by API limitations.

Jumbo, set my smart privacy to...

Weak Medium **Strong**

Most of your Facebook information will be only visible by you.
Jumbo will disable face recognition and restrict ads.
Also, Jumbo never changes a setting to a less restrictive option.

[Learn more about Smart Privacy](#)

f Log in with Facebook

Works with Facebook, Twitter, Google Search and Alexa.

More apps are coming soon!

By comparison, the Facebook experience is better. Connect using Jumbo, and the app will go through the company's 40 or so settings and change them to limit the visibility of your posts. Rather than ask you to make more granular decisions, Jumbo offers "weak," "medium," and "strong" privacy settings. The medium setting makes most of your profile information available only to friends; the strong setting makes most of that information visible only to you.

Facebook offers no API to let developers change privacy settings, so Jumbo has to fudge it. In essence, the app uses scripts to mimic the process of clicking on the various settings to change them to your liking. "We're not doing anything you wouldn't be able to do yourself," Valade says. "We're trying to be a third party who works on your behalf to help you simplify and make decisions about a complex system."

Jumbo can also limit the amount of time that Google stores your search results, and it can delete the voice recordings that Amazon stores from your Alexa usage. In the future, Jumbo hopes to let you clean up your public Instagram posts and delete your Tinder conversations.

"WE'RE TRYING TO BE A THIRD PARTY WHO WORKS ON YOUR BEHALF TO HELP YOU SIMPLIFY AND MAKE DECISIONS ABOUT A COMPLEX SYSTEM."

All of this remains at least somewhat contingent on the tolerance of the companies whose settings Jumbo manages. Valade says he did not contact Facebook, Twitter, or others during the development process. It's possible that they could seek to restrict it from inserting itself in between users and their privacy settings by introducing a CAPTCHA, for example, or by taking legal action. Doing so might earn them a round of bad press, but they could also argue that an app like Jumbo creates security concerns for users.

Even if it manages the risk from the platforms, it still has to build a sustainable business. (The company has raised \$3.6 million in venture capital from investors, including Thrive Capital.) Jumbo will be free at launch, and Valade says the company plans to eventually charge power users for extra features. While people will often say they care deeply about privacy, it's unclear how large the market is for the smartphone users who are willing to pay for it.

All of that said, as an idea, Jumbo's time has come. A service that stays on top of tech companies' ever-changing privacy settings and manages them toward the most restrictive settings would be a welcome addition to the tech world. I hope something like it can survive, even if I worry that it can't.

Home : Software Terms : Firmware Definition

Firmware

Firmware is a software program or set of instructions programmed on a hardware device. It provides the necessary instructions for how the device communicates with the other computer hardware. But how can software be programmed onto hardware? Good question. Firmware is typically stored in the flash ROM of a hardware device. While ROM is "read-only memory," flash ROM can be erased and rewritten because it is actually a type of [flash memory](#).

Firmware can be thought of as "semi-permanent" since it remains the same unless it is updated by a firmware updater. You may need to update the firmware of certain devices, such as [hard drives](#) and video cards in order for them to work with a new [operating system](#). CD and DVD drive manufacturers often make firmware updates available that allow the drives to read faster media. Sometimes manufacturers release firmware updates that simply make their devices work more efficiently.

You can usually find firmware updates by going to the "Support" or "Downloads" area of a manufacturer's website. Keeping your firmware up-to-date is often not necessary, but it is still a good idea. Just make sure that once you start a firmware updater, you let the update finish, because most devices will not function if their firmware is not recognized.

" Product Datasheet BRAIME JUMBO CC-S® Elevator Bucket JUMBO CC-S® Ultra Heavy-Duty Agricultural & Industrial Elevator Buckets OVERVIEW: The JUMBO CC-S® is an ultra heavy duty version of the CC-S heavy duty elevator bucket, and part of 4B's High Efficiency bucket range. It is intended for the most severe applications, including port terminals, ethanol plants and highly abrasive materials. It offers the greatest capacity and thickest front lip, corners and walls available. The unique Iceberg Edge front face delivers impact resistance and long life. It shares the proven geometry and design features of the CC-S, including the benefit of stackability, which saves on freight costs and storage space. The JUMBO CC-S® is moulded from virgin HDPE (nylon and urethane also available) for ultra heavy duty strength and durability. MATERIAL: Tough commercial grade materials - highdensity polyethylene, nylon or urethane (all materials prime virgin grade) TEMPERATURE RANGE: HDPE: -85 to 95°C Nylon: -50 to 160°C Urethane: -50 to 100°C FEATURES: Maximum Capacity Ultra Tough and Flexible Thickest Front Lip, Walls and Corners for Long Life Stackable Design for Efficient Shipping and Storage Tapered Bottom for Closer Vertical Spacing (up to 4.6 buckets / metre) ACCESSORIES Bolts - Norway, Fanged, Euro or Easifit Washers & Nuts Belting - Rubber, PVC, Steel Web Belt Fasteners Unique Iceberg® Edge front lip offers superior material thickness for the ultimate in wear resistance and long life. Its triangular base creates a stiffening ridge across the front face of the bucket, preventing bowing and ensuring a consistent discharge over the life of the bucket. The tapered leading edge generates a low digging factor. This means less material resistance, less material degradation and fewer forces on the bucket system. Engineered to be stackable, JUMBO CC-S® elevator buckets nest inside one another reducing storage and shipping space. Freight cost savings are realized as fewer pallets are required and their increased density offers a lower freight classification. Information subject to change or correction. ABOUT US

BRAIME GROUP PLC

The group is involved in the manufacture of metal presswork and the distribution of bulk material handling components. The group's history dates back to the formation of Braime Pressings in 1888, originally for the production of oilcans.

The group is headquartered in Leeds, United Kingdom, but also trades from locations in France, South Africa, Australia, Thailand, China and the United States.

Our strategy

The main area of the business is the supply of goods and services for handling and processing industrial, and in particular, agricultural commodities. This sector is currently a growth industry with a global market. Our strategy is to invest in increasing our market reach while continuing to develop new products. We recently launched our latest subsidiary, 4B China, in Changzhou, Jiangsu province of China having closely consulted on local opportunities with our key customers in the region.

We continue to enhance features of our secure, cloud based industrial monitoring solution, Hazardmon which is revolutionary for introducing greater levels of transparency and record keeping. We will continue to investigate new geographical markets.

4B Polysur® Steel Web Core Belting

The 4B Polysur® steel web core belt is a rubber elevator belt with a special steel cord core. The cords provide low elongation with high elasticity in the length, and cross rigidity in the width. The built-in elasticity allows running over slightly crowned pulleys which greatly improves belt tracking, and helps to avoid belt wandering which is often the reason for elevators shutting down. The rigid welt cords act as a barrier to ripping and tearing which increases the holding ability for the bucket bolts. This produces a good cross rigid belt resulting in excellent straight tracking characteristics.

In contrast, most conventional steel cable belts lack elasticity and consequently have to run over truly flat, cylindrical pulleys which increases the risk of belts off-tracking.

The 4B Polysur® steel web core belt is designed for heavy duty/industrial bucket elevator applications with long centre distances that require stable running and reliable belts with high safety factors. All 4B Polysur® steel web core belts are manufactured in accordance with DIN 22102 and ISO norms.

Detailed View of Steel Web Core

Features

- Anti-static
- Strength - up to 2,250 PW (4,000 N/mm)
- SBR, EPDM and EPM 1/8 x 1/8, 5/32 x 5/32 or 3/16 x 3/16 (3+3, 4+4, or 5+5 mm) rubber covers
- 0.35% maximum elongation at 10 SF
- Belt holes drilled to customer specifications
- Temperature resistant up to 302 °F (150 °C) continuous, short peaks 356 °F (180 °C)

4B Polysur® Steel Web Core Belting

4B Polysur® Steel Web Core Belts Are Available In Six Different Types -

- T60** Very good abrasion resistant quality, based on SBR rubber for use with ambient temperatures of 140 °F (60 °C)
- T100** Improved version of the T60 for product temperatures of 194 - 212 °F (90 - 100 °C) and short peaks up to 248 °F (120 °C)
- T130** Based on EPDM rubber, suitable for product temperatures up to 266 °F (130 °C) and short peaks up to 302 °F (150 °C)
- T150** Based on EPM rubber, suitable for product temperatures up to 302 °F (150 °C) and short peaks up to 356 °F (180 °C)
- G** Suitable for handling oily and fatty product at temperatures up to 176 °F (80 °C)
- ALE** White rubber food quality suitable for non-fat food products at ambient temperatures

4B Braime Clamp Elevator Belt Splices & Fasteners

Braime Clamp - BC3 Shows With Steel Web Core Belt

The Braime Clamp (BC) series of heavy-duty belt splices securely fastens belting on larger bucket elevators. As the originator of this style of belt clamp, 4B designed it from three pieces of extruded aluminum including a center wedge section to minimize belt wear.

The BC2, BC3 and BC4 versions fasten steel web core belting. They incorporate an additional three piece machined steel vise grip section designed to ride above the aluminum base clamp and secure the steel cords within a steel web core belt.

JUMBO CC-S

Agricultural & Industrial Elevator Buckets

The JUMBO™ CC-S® is an ultra heavy duty version of the CC-S heavy duty elevator bucket, and part of 4B's High Efficiency™ bucket range. It is intended for the most severe applications, including port terminals, ethanol plants and highly abrasive materials. It offers the greatest capacity and thickest front lip, corners and walls available. The unique Iceberg® Edge front face delivers impact resistance and long life. It shares the proven geometry and design features of the CC-S, including the benefit of stackability, which saves on freight costs and storage space. The JUMBO CC-S is molded from virgin HDPE (nylon and urethane also available) for ultra heavy duty strength and durability.

MATERIAL:
Virgin HDPE, Nylon or Urethane

TEMPERATURE RANGE:
HDPE: -120° F to 180° F
Nylon: -60° F to 300° F
Urethane: -60° F to 180° F

- FEATURES:**
- Maximum Capacity
 - Ultra Tough and Flexible
 - Thickest Front Lip, Walls and Corners for Long Life
 - Stackable Design for Efficient Shipping and Storage
 - Tapered Bottom for Closer Vertical Spacing (Projection +1/2")

APPLICATIONS:
Free Flowing Agro-Industrial Materials: Grains, Feeds, Fertilizer and Pellets
Also Suited for Rough & Abrasive Materials: Frac Sand, Cement and Aggregates.

U.S. Patent D496-052
