

## MetaGeek Plus

MetaGeek Plus outfits you with WiFi diagnostic software and robust cloud analytics, with wireless education built right into the tools. Not only will you be able to expertly diagnose issues when things go wrong, but you'll be able to proactively manage WiFi deployments so that they don't.

# Network Snapshots

## Picture your environment

When you're trying to catch a WiFi issue as it happens, it's difficult to remember the exact state of your wireless environment. Network Snapshots in inSSIDer and Air Viewer make capturing crucial network information as easy as clicking a button, so you can build a picture of your network over time, click by click.

# Rampart

## Get the best view

Rampart is the cloud platform for storing, viewing, and working with WiFi snapshot data. As you build up your snapshot library, Rampart will show you baseline performance of your WiFi and your wireless environment and let you know when things change. If your network is your castle, Rampart is where you stand to get the best view.

PRO

## Teams

Collaborate across sites

You don't work in a silo, and neither should your apps. MetaGeek Plus Pro lets you share snapshots with your team, see who last updated a Site or Room, and create notes so that everyone working on a network has access to the same information.

## Supercharge

Level up your MetaGeek Apps

MetaGeek Plus plans unlock powerful features in the MetaGeek family of apps you already use, like client traffic analysis capability in Air Viewer and snapshot captures in inSSIDer.

MONTHLY

ANNUAL

**PLUS**

You're ready for the next level of WiFi mastery. WiFi may not be your only job, but it's an important one. Don't worry, we've got your back.
