HEAT & COOL

Ductless, Mini-Split Heat Pumps

[Home](#) » [Heat & Cool](#) » [Heat Pump Systems](#) » Ductless, Mini-Split Heat Pumps

Ductless, mini-split-system heat pumps (mini splits) make good retrofit add-ons to houses with "non-ducted" heating systems, such as hydronic (hot water heat), radiant panels, and space heaters (wood, kerosene, propane). They can also be a good choice for room additions where extending or installing distribution ductwork is not feasible, and very efficient new homes that require only a small space conditioning system. Be sure to choose an ENERGY STAR® compliant unit and hire an installer familiar with the product and its installation.

Like standard air-source heat pumps, mini splits have two main components -- an outdoor compressor/condenser and an indoor air-handling unit. A conduit, which houses the power cable, refrigerant tubing, suction tubing, and a condensate drain, links the outdoor and indoor units.

Advantages

The main advantages of mini splits are their small size and flexibility for zoning or heating and cooling individual rooms. Many models can have as many as four indoor

2/13/2020

air-handling units (for four zones or rooms) connected to one outdoor unit. The number depends on how much heating or cooling is required for the building or each zone (which in turn is affected by how well the building is **insulated** and **air sealed**). Each of the zones has its own thermostat, so you only need to condition occupied spaces. This will save energy and money.

Ductless mini-split systems are easier to install than some other types of space conditioning systems. For example, the hook-up between the outdoor and indoor units generally requires only a three-inch hole through a wall for the conduit. Most manufacturers of this type of system can provide a variety of lengths of connecting conduits, and, if necessary, you can locate the outdoor unit as far away as 50 feet from the indoor evaporator. This makes it possible to cool rooms on the front side of a house, but locate the compressor in a more advantageous or inconspicuous place on the outside of the building.

Mini splits have no ducts, so they avoid the energy losses associated with the ductwork of central forced air systems. Duct losses can account for more than 30% of energy consumption for space conditioning, especially if the ducts are in an unconditioned space such as an attic.

In comparison to other add-on systems, mini splits offer more interior design flexibility. The indoor air handlers can be suspended from a ceiling, mounted flush into a drop ceiling, or hung on a wall. Floor-standing models are also available. Most indoor units are about seven inches deep and have sleek, high tech-looking jackets. Many also offer a remote control to make it easier to turn the system on and off when it's positioned high on a wall or suspended from a ceiling.

Split systems can help keep your home safer, because there is only a small hole in the wall. Through-the-wall and window-mounted room air conditioners can provide easy access for intruders.

Disadvantages

The cost of installing mini splits can be higher than some systems, although lower operating costs and rebates or other financial incentives -- offered in some areas - can help offset the initial expense.

The installer must correctly size each indoor unit and determine the best location for its installation. Oversized or incorrectly located air handlers can result in short cycling, which wastes energy and does not provide proper temperature or humidity control. Too large a system is more expensive to buy and operate.

Some people may not like the appearance of the indoor part of the system. While less obtrusive than a window room air conditioner, these units don't have the built-in look of a central system. There must also be a place to drain condensate water near the outdoor unit.

Qualified installers and service people for mini splits may not be easy to find. Check with local heating and cooling contractors to find out how common these systems are in your area and who has experience installing and servicing them.

Keeping Homes Cool

Whether you're living in a climate that is warm year-round or enduring a summer heat wave, Carrier helps ensure that your home offers a consistently cool escape from outdoor extremes.

An Ideal Degree of Comfort

From scorching heat to stifling humidity, summer weather extremes can make the outside world rather uncomfortable. However, in your home, Carrier® cooling solutions ensure that you're never at the mercy of the weather forecast.

Indoor comfort is a product of technologies that control temperature, humidity, and air quality. Through innovations like our Infinity® system, Carrier places complete control at your fingertips, helping you maintain precise conditions – even when it's blistering outdoors.

And to create comfort that's right for everyone, Carrier technology even allows you to manage conditions independently in up to 8 zones of your home. This ensures ideal comfort for varying environments such as the kitchen, living room and bedrooms, and for the individual preferences of you and your family members.

At Carrier, we take a healthy approach to home comfort. That means temperature and humidity management go hand-in-hand with our Infinity system controls. And indoor air quality goes beyond filtration to killing germs. We offer air purification solutions that can kill or inactivate up to 99 percent of everything they capture – including mold, allergens, and tiny pathogens that cause the flu and common cold.

We're also committed to helping customers maintain a healthy bottom line when it comes to energy bills. Our Infinity® heat pump with Greenspeed® intelligence is one of the most efficient of its kind in heating mode with cooling that rivals our highest efficiency air conditioner. And the Infinity® Touch Control can give you energy tracking insights while it actively manages the system to ensure your ultimate comfort in the most efficient, cost-effective way possible.

And, because comfort should be felt, not heard, Carrier innovations have led to some of the quietest home comfort products available. Our outdoor units with variable-speed or 2-stage technology are designed to minimize sound.

Just as cultures and climates vary, no two homes around the world are exactly alike. That's why Carrier offers different types of air-conditioning systems to meet your needs. So whether it's an air conditioner, packaged heat pump or ductless system, you can count on the installation and service expertise of independent Carrier contractors to help you select and maintain the right solution for your ideal comfort.

Keeping Homes Warm

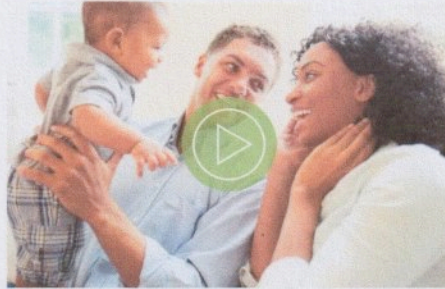

While the outdoor weather is beyond your control, Carrier's efficient heating solutions ensure that the indoor forecast is always entirely up to you.

Consistent Comfort

From the coldest extremes to the warmest temperatures on earth, homes around the world are built with the outdoor climate in mind. And while your house, flat, apartment or bungalow can be designed to withstand the unpredictability of various geographic areas, the outdoor weather remains beyond your control.

However, when you are in your home, you should not have to worry about the indoor weather. That forecast should be entirely up to you.

Carrier® home heating and cooling solutions place control of temperature, humidity and air quality at your fingertips, providing the ideal level of comfort to make your living space always feel like home – regardless of season or climate.

We do not just keep you warm or cool – we keep you comfortable. Our energy-efficient products can work together to maintain consistent temperature and humidity and keep air circulating from hour to hour, minute to minute, and room to room.

Engineering and innovation drive both our world-renowned heating and cooling products. Carrier's top gas furnace, the Infinity® 98 with Greenspeed® intelligence, is the quietest and most energy-efficient furnace in Carrier's history, with an Annual Fuel Utilization Efficiency of up to 98.5 percent. Carrier delivers precise comfort with reduced energy use – keeping your home comfortable and quiet while decreasing your energy costs.

And that's one of the many economical heating options that Carrier delivers to consumers. Carrier's commitment to innovation led to the development of a Hybrid Heat® dual-fuel system, which includes a heat pump and gas furnace, managed by a compatible control or thermostat. As the temperature drops outside, the system automatically switches to your second heating source, helping to keep your home comfortable in the most efficient, cost-effective way possible.

When coupled with the installation and service expertise of independent Carrier contractors, innovations like these keep customers around the world turning to the experts at Carrier.

No matter what the conditions are outside of your home, comfort is something you should not have to think about when you are indoors. That is why Carrier is trusted around the world.

Heating & Cooling Repair, Installation and Cleaning Services

Often, finding a trustworthy HVAC company can be a difficult task. Years ago, the inability to confidently name one trustworthy heating and cooling business in the Chicagoland area led to the start of our honest, reliable and professional company: Lakeview Heating and Cooling.

At Lakeview Heating and Cooling, we take pride in being a locally owned and operated HVAC company. Founded in 1998, Lakeview Heating and Cooling has provided excellent service and high quality technicians with over 25 years experience backed with elite service award from [homeadvisor.com](#) and the Better Business Bureau.

Our mission is to provide every customer with high-quality services that exceed expectations, making us the local heating and cooling company that Chicago city residents can refer to their friends and neighbors with confidence—and without hesitation. That's why, whether you're in need of a heating repair in lakeview, an air conditioning replacement in Wrigleyville, or just regular seasonal maintenance in Bucktown, our company will work tirelessly to provide you with industry-leading HVAC services for complete home comfort through every season and at anytime.

SERVICES

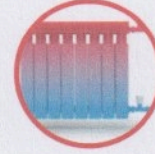

Furnaces

We service and repair all major brands. We proudly install new Rheem furnaces.

Air Conditioning

For more than two decades Chicagoland has trusted us for service and repair on all brands. Further, we install new state-of-the-art Rheem equipment.

Boilers

Whether you have a steam or hot water system, you can be sure we have the expertise for any maintenance or repair need you have.

Emergency Repair

Have an have an emergency repair? Whether it is boiler, air conditioner, or furnace we can fix it. Lakeview Heating and Cooling offers a **24 hour emergency repair**. We have experienced technicians around the clock waiting to help you.

About

Proudly serving the Chicago land area since 1998, our comfort specialists are experts in the heating and air conditioning industry—earning 100 percent customer satisfaction in Lakeview and the surrounding communities. We provide the very best services at affordable prices because our trained and certified technicians are committed to delivering innovative heating and cooling solutions tailored to fit your home—and your budget.

From servicing an AC repair in Roscoe Village, to a heating service in Uptown, Lakeview Heating and Cooling has worked our way to being the company of choice for local homeowners. If you live in Lakeview or any of the surrounding areas, you can trust our team to help you choose the proper air conditioning or heating solution for your home, and provide you with high-quality HVAC services to meet your every need—all year long.
