

## BULK OXYGEN

Cryogenic Medical Gases has long been a premier supplier of medical grade oxygen in liquid and gaseous forms. Our state-of-the-art transfilling facility and 9000-gallon bulk liquid oxygen storage vessel enables healthcare providers to benefit from our services. We are centrally located on the I-25/I-70 corridor in central Denver, so we can quickly get you what you need.

Our range of services includes bulk liquid oxygen and our cylinder services include fills, rentals, sales, repairs, hydro testing, pick-up at our facility or delivery to your facility. We can fill small to large cylinders, including M6, C, D, E, M and H. We also have a wide range of dewars available for rental.

You can pull right up to our liquid storage vessel and have your truck-mounted storage tanks filled with liquid oxygen in record time because our LXC series cryogenic pump is specifically designed for the fast and efficient transfer of cryogenic liquid.

We abide by all applicable FDA regulations and provide training and monitoring to assure compliance. We have an excellent record with the FDA due to our good manufacturing practices.

From servicing the small home care dealer, to providing services for a piped-in liquid oxygen system in a long-term care or rehab facility, Cryogenic Medical Gases has the necessary expertise.

We look forward to helping you with all your oxygen needs!
