MK MORSE Band Saw Blades

1 product

Band saw blades are used in stationary and portable band saws to cut a variety of materials, including wood, ceramic, composite materials, food stuffs, and hard and soft metal. Welded band saw blades form a continuous loop and come in pre-determined lengths for use on standard stationary and portable band saws. Band saw blade coil stock is one continuous length of blade, allowing shops to cut and weld blades to custom lengths. Coil stock is used in blade houses and facilities that have blade welders onsite. Blades for portable band saws are welded blades used to cut pipe, tube, and structural elements where the saw needs to be carried to the workpiece.

General Purpose Standard-Width Band Saw Blades

These standard-width general purpose band saw blades are used to cut a variety of common metals including mild steel, stainless steel, aluminum, and softer metals such as brass. General purpose blades are often in maintenance shops where a variety of materials are cut so blades don't have to be changed between cuts. Standard-width blades are designed for occasional use, such as maintenance tasks and short-run production.

↑ Blade Width	Blade Length	Blade Thickness	Teeth per Inch	For Material Width	Item #	Price
MK Morse M42—Bi-Metal Blade for Production Use						
3/4 in	93-1/2 in	0.025 in	6	1-3/4 in to 3 in	48VF23	\$39.50 / each ▼
