

symmetry™

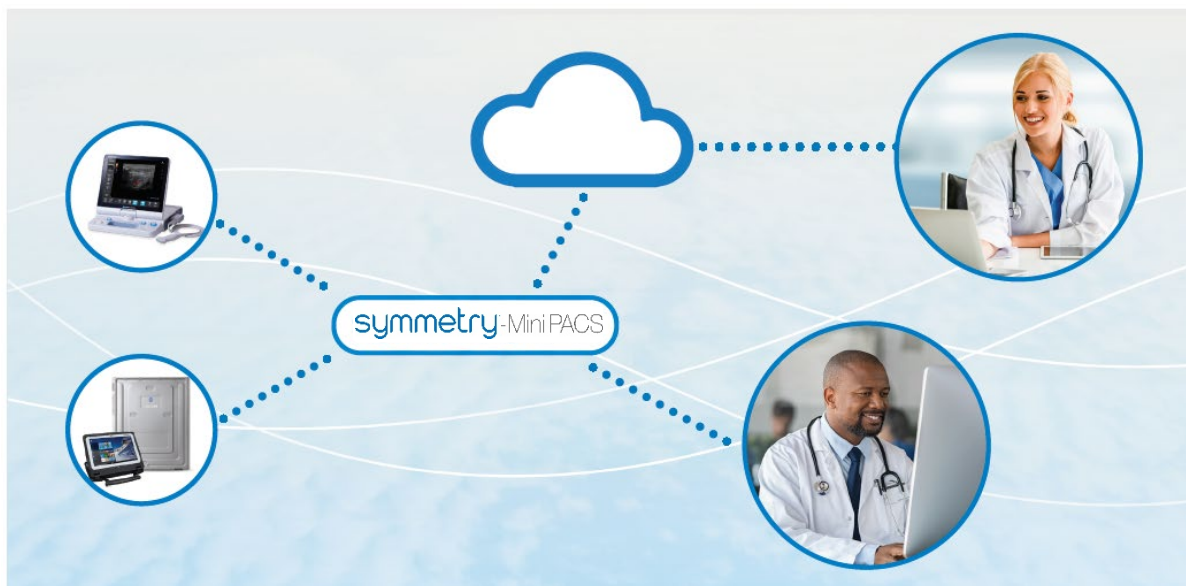

Symmetry™ is built on the proven Exa® Platform for fast access to images from any device scaled for the specialty care market. Symmetry provides your practice with the features and tools necessary to optimize and simplify workflow with an entirely web-based, Zero Footprint (ZFP) imaging software platform far superior to other PACS systems available on the market.

Symmetry PACS is the perfect fit for orthopedic, family medicine, urgent care, multi-specialty practices and community hospitals. These facilities need an imaging solution that's easy to use and available wherever you need it, from the operating room to your home office. Symmetry PACS allows you to seamlessly access imaging and patient data across all your devices – fast!

Symmetry PACS is available on a smaller hardware footprint for a cost-effective solution. Since Symmetry PACS is web-based, you can view images from anywhere.

Symmetry PACS provides the platform to collaborate across caregivers. Radiologists can access images remotely to read from anywhere and send reports to store in Symmetry PACS. Symmetry PACS can also send reports and images to the referring provider to access from within their EHR.

With Server-Side Rendering, images are available immediately as large files are not required to be downloaded to workstations. With a Zero Footprint, fully diagnostic viewer, images are displayed from any device, including desktop computers and tablets. No downloads or plug-ins required. No expensive workstations are required to view images.

Symmetry Mini PACS provides the same power as Symmetry PACS but delivered on a smaller hardware footprint. Symmetry Mini PACS is an ideal solution bundled with Konica Minolta's Digital Radiography and Ultrasound solutions.
