Solutions for OMS and EMS Platforms

With our OMS and EMS Platforms offering, we align business goals with user needs—and business processes with technology requirements—to help you create a more efficient business model.

Our experience with such industry-leading order management systems (OMSs) as Charles River IMS and Bloomberg AIM can help you improve margins through front-office optimization. And, our custom development, integration, and implementation expertise ensures seamless connectivity and operations throughout your firm.

Our solution combines strategic advisory services with end-to-end support and technical resources and includes:

- › **Advisory services** — We utilize our deep understanding of the needs of buy-side firms—from both a business and technology perspective—to help you realign your business model, while fully leveraging your existing infrastructure and resources.
- › **Implementation and integration services** — We speed time to market by leveraging a best-practice approach and “accelerators” for implementing and integrating OMSs, execution management systems (EMSs) and portfolio accounting (PA) systems.
- › **Process solutions** — Using our extensive product knowledge, practical operations experience and broad change management expertise, we can help ensure that your operating model and post-trade workflows are in line with best practices and are optimized for the size and complexity of your business.
- › **Staff augmentation** — Our Globally Distributed Delivery model provides instant access to resources that have experience working with OMS, EMS and PA systems
