System Requirements

Will run on any PC with any operating system, and stores keystrokes from the moment the PC is powered on.

To retrieve keystrokes, a simple text editor is required, and the Keyghost will re-type keystrokes in its memory into the editor.

Disclaimer

Interface Security Limited, Keyghost Limited and all it subsidiaries and suppliers disclaim all liability with regards to the use of this device in any situation, or circumstance, and may not be held liable in any manner for the legitimate or illegitimate use of the Keyghost range of products. Interface Security Limited, its suppliers and distributors are not to be held liable for any consequential loss due to the use of this product.

WARNING!

Use of this device for any purpose other than the backup or monitoring of keystrokes on your own computer may be in criminal violation of local applicable laws. In accordance to the disclaimer above, it is the end users responsibility to ensure that legal conditions be met with regards to the use of any Keyghost device.

KEYGHOST
Record Keystrokes In A Flash

Records and plays back all keystrokes in a tiny Keyghost adapter that connects to the keyboard.

Stores all keystrokes in permanent memory that does not require power to retain storage.

Works with all operating systems on any PC. Runs independently of the CPU and cannot be detected under normal operation.

KEYGHOST
Record Keystrokes In A Flash

The Technology Has Arrived.
Record Keystrokes In A Flash.

Keyghost records all keystrokes on a tiny device external to the computer, that can be discreetly installed in seconds. It has a memory storage that does not require batteries to retain data.

Store up to two million keystrokes on a Keyghost.

The Keyghost can play back your keystrokes into a text editor and requires none of its own software or drivers to operate. In addition, the Keyghost II Professional range have integrated 128 bit encryption and password protection to secure your log from unauthorized access.
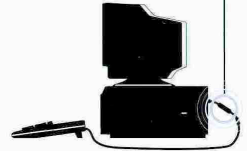

Tiny device installs in seconds on any PC

Features

Records and plays back up to 2,000,000 keystrokes (Keyghost II Pro SE) in its own non-volatile flash memory _without batteries_.

No Software required to install onto host computer, no need to open case or even turn the computer on to install a Keyghost.

Will run on any P.C. Operating system.
