**Products**

This page lists many of the nontoxic high density custom compounds representing the spectrum of materials that we formulate and produce. Ecomass Compounds nomenclature is based on the primary thermoplastic resin used in the formulation and are grouped accordingly.

The technical data sheets, processing guides, and material safety data sheets below are representative of our custom compounding capabilities and are designed to provide you with comparative information on standard materials.

We create hundreds of compounds every year based on individual customer and application needs. For technical support or assistance, please **contact us** via this web site or call us at 1-877-ECOMASS (1-877-326-6277).
