Welcome to C-Print®

C-Print is a speech-to-text system developed at the National Technical Institute for the Deaf (NTID), a college of Rochester Institute of Technology (RIT), as a communication access service option for some deaf and hard-of-hearing students in educational environments. It was developed by researchers to improve the classroom experience for students at both the secondary and college levels.

Today, C-Print is successfully being used to provide communication access to individuals who are deaf or hard of hearing in many programs around the country. In addition to educational environments, the system can be used in meetings and workshops and with individuals with other disabilities.

Please contact us for further information about the C-Print technology and products.
