The market leaders in post-trade

Products Overview

Traiana provides a suite of products to address the myriad of post-trade challenges and needs in the market today.

With one connection, firms are connected to all of their trading relationships, significantly reducing the complexity of these relationships, increasing operational efficiency and removing the costs associated with maintaining multiple connections.

Built to minimize the number of touches required to fully process post-trade workflow end-to-end, Harmony provides complete real-time automation of the processing workflow. This real-time processing ensures that any trade breaks between any counterparties can be identified and corrected immediately - significantly reducing operational risk. Connecting to the Harmony network is easy - the adaptive integration layer can produce either industry standard messaging or any proprietary format. No matter how simple or complex a firm's post-trade processing needs, the network ensures rapid implementation with minimal IT or software footprint.

Asset classes supported include FX, equities, equity derivatives and exchange traded derivatives. Instruments supported include cash (spot, forwards, swaps, mismatch swaps, NDF's), precious metals (cash, options). Options (vanilla, barrier) and double barrier (digitals, non-deliverable options and third currency premiums).

Connecting clients and counterparties

Harmony Message Center - an industry standard for STP for prime

Streamlining operations

Harmony Prime Broker - a lightweight hosted prime brokerage platform that incorporates best practices for trade flow processing.

Managing risk

Harmony CreditLink - a consolidated, real-time credit monitoring solution that spans across client segments and credit relationships.
