Platform

ONE PLATFORM + INNOVATIVE APPLICATIONS = GAME CHANGING RESULTS

Supply chain management technology and software traditionally create solutions specific to one part of the entire supply chain, giving the organization a limited view. But what if an organization had access to view the entire supply chain?

ArrowStream's Software-as-a-Service (SaaS) platform will give your supply chain a complete and comprehensive view across the entire supply chain. Through a set of unique software solutions that reside on the platform, your supply chain can reach your current goals and beyond.

ArrowStream has provided a supply chain solution that is a win, win, win for Wendy's, its distributors and suppliers. Everyone is working from the same data, saving time, reducing costs and making LTOs more effective in order to foster customer satisfaction.

Crossbow

ArrowStream's Crossbow software solution is built to capture an inbound freight program's true savings, by establishing collaborative decision-making between Purchasing and Logistics. Crossbow is not a transportation management system or a purchasing system. It is a unique, patented approach that complements both systems to tap into opportunities they cannot reach individually.

OnDemand

OnDemand is innovative in functionality while groundbreaking in information-sharing capabilities. OnDemand connects supply chain operations with multiple key business functions through a vast and constantly updated repository of critical purchase data.

ArrowScan

ArrowStream's ArrowScan brings clarity and bottom line impact to food cost control by eliminating the blind spot in back office operations, and closing the automation loop of inventory management. Connected wirelessly with ArrowStream's platform, ArrowScan combines rock-solid store and distributor information with the power of the latest handheld scanning technology.
