

**MINWAX®** Paste Finishing Wax protects and adds hand-rubbed lustre to any finished wood surface. Recommended for furniture, antiques, woodwork, cabinets, doors, paneling and accessories that do not need a hard protective coat of polyurethane.

#### **DIRECTIONS**

All surfaces must be free from dust, dirt, grease etc. Apply a thin, even coat of Paste FINISHING WAX with a clean cloth. Allow wax to dry thoroughly (10-15 minutes) and polish with a clean cloth, weighted buffer or electric polisher. A thin even coat can be conveniently applied by placing a small quantity of WAX in double thickness of cheese cloth and applying only the amount that works through cloth as it is rubbed over surface. THIS WAX PRODUCES A HARD, DRY OIL-LESS POLISH.

**NOTE: DO NOT USE ON RUBBER OR ASPHALT TILE.**

**Para obtener las indicaciones y las precauciones en español, llame al numero de telefono de la Compania Minwax que aparece mas abajo.**

**SOLVENT:** Non Photochemically Reactive
