TRACTION MOTORS ALTERNATORS GENERATORS ARMATURES COMPONENTS

RPI brings a value-added approach to our product offering.

We offer a choice of repair, rebuild or remanufacturing services for all assemblies or components, and our unit exchange program for armatures, coils, traction motors, generators and alternators helps keep service interruptions to a minimum.\*

We can also tailor manufacturing processes and customize our products and services to meet your exacting demands and specifications. That flexibility allows us to operate on a very large scale

if needed and as a "job shop" for small projects, giving you the best of both worlds. We provide product development, improvement and upgrade services as well, and even serve as a primary supplier of armatures, coils, coil kits, commutators and other items to in-house locomotive shops and other locomotive rebuilders.

\*Some of our products are manufactured exclusively for specific customers.
