

T-TECH[™] ADVANTAGES

www.ttechonline.com

The Benefits of ATF Exchange are Clear with T-TECH

- ✔ **FAST**
T-TECH features quick connect hoses and an easy hook-up to the transmission cooling line for a quick start. From hooking to hook-down, most vehicles can be serviced in 15 minutes or less.
- ✔ **ASSURED**
Because the exclusive T-TECH process is powered by the vehicle's own pump, the concern of over- or under-pressuring the system are eliminated. Plus, the T-TECH exchange is 100% proportional – for every quart removed, a new quart automatically flows its share – to ensure an accurate fill every time.
- ✔ **SMART AND CONVENIENT**
An auto-bleed feature means there is no need to verify fluid flow prior to starting and no possibility of a reverse connection. An auto-bypass safety switch frees the operator for other tasks by sending the unit into bypass mode upon completion of the service.
- ✔ **COMPLETE**
The exclusive T-TECH process exchanges virtually 100% of the vehicle's ATF in a proportional, even exchange. Old transmission fluid is pulled from the most stubborn and difficult-to-reach areas of the transmission system, including the torque converter and cooler.
