- [Vibration Measurement](#)

When your equipment is being transported from the manufacturer to the installation site, you need to be sure that it is handled with all due care and in compliance with national and international regulations.

SGS offers comprehensive specialist support at the transportation and installation phase of a project. Our services range from assessment and auditing to testing and technical assistance to help monitor the supply chain and ensure that your equipment is transported and delivered safely and to schedule. With SGS, our global coverage and depth of expertise gives you access to the most up-to-date industry support and techniques.

Solar panel systems are often assembled from parts made by different suppliers and then brought to the installation location. SGS can help ensure the quality and integrity of the entire installation by checking the quality of its component parts and ensuring their safe transportation and delivery.
