Day & Zimmermann Engineering, Construction, and Maintenance (D&Z ECM) group is a leading provider of total plant lifecycle solutions for the power, process and industrial markets. With more than 23,000 employees, a network of strategic locations, and a proud history of more than 100 years, D&Z ECM has developed a portfolio of offerings designed to maximize value creation for its customers.

We deliver complex projects safely, on time and within budget by leveraging wide-ranging capabilities, long-standing industry experience, innovative technology, and expert project teams. Our unique approach employs seamless processes that effectively manage all aspects of the plant lifecycle. From nuclear and fossil plants to specialty chemical and food & beverage production facilities, our clients reap the rewards of shortened cycle capital projects, optimized operations and maintenance investments, and a safe, secure environment for all stakeholders.

Our capabilities include plant maintenance and modifications; power plant outages; process and industrial plant shutdowns and turnarounds; specialty services; and capital projects.

As part of our Managed Maintenance Solutions™, Day & Zimmermann provides comprehensive radiological services to support the nuclear power industry in balance-of-plant and refueling outage activities. Our senior health physics and decontamination technicians have been deployed to support nuclear power stations throughout the United States, including Arkansas Nuclear One, Fermi, Hope Creek, Kewaunee, Pilgrim, Point Beach and many more.

With deep resources that allow us to staff more than 6,000 maintenance-related outage positions every spring and fall, Day & Zimmermann has developed innovative ways to increase the efficiency of our maintenance and radiation protection efforts while building a more valuable workforce. One of our most successful efforts in this area is the cross-training and qualification of technicians in both the AOV and MOV valve service disciplines. This approach allows us to utilize a single work crew to not only repair valves, but also perform:

- ALARA reviews of valve work packages prior to the start of the outage
- Routine radiological surveys and results review to identify areas of concern
- Radiation Work Permit reviews for submission to the RP Department
- Pre-job briefings for work area radiological controls and concerns
- Control area set-up and teardown using site contamination control procedures
- Specific RP job coverage for integrated valve service work crews
- End-of-job lessons learned reports for work-specific outage activities

In addition to health physics and decontamination technicians, Day & Zimmermann also provides in-processing instructors and other related specialists to a variety of companies.
