Overview **Specifications** Resources

Reduce the complexity of event log management across your heterogeneous network, lower your storage administration costs and improve the efficiency of security, operational and compliance reporting with InTrust. Securely collect, store, report and alert on event log data from your Windows, Unix and Linux systems, ensuring compliance with external regulations, internal policies and security best practices. Gain insight into user activity by auditing user access to critical systems from logon to logoff, and detect inappropriate or suspicious access-related events in real time.
