Help Alert® for Staff Safety

The threat of violence in today's healthcare environment is higher than any other work setting.

Reduce the risk of violent incidents and injury with the Help Alert® Wireless Staff Duress solution, a mobile panic alarm that can be used anytime, anywhere.

Added Peace of Mind
Help Alert uses mobile pendants, or "panic alarms," that enable staff to call for help with just the push of a button.

- Panic alarms help responders locate staff even if they're on the move, unlike fixed panic buttons or repeater-based systems
- Discreet, silent alarm can alert onsite security teams for a faster response
- Leverage your existing Wi-Fi: no wires, power cables, or any new construction work needed for a cost-effective installation
- Present an attractive, safe environment to patients: avoid negative publicity from violent incidents

Powered by PinPoint® RTLS Technology
Since our mobile pendants provide widespread coverage, you want software that can do the same. Software shows detailed pendant location information on security monitors and optional mobile devices, so help can get where it's needed most.

- View alerts in real time: the pendant's location will update on a floor plan
- Software stores alarm data: help predict alarms, spot trends, evaluate budgets or track response times
- Free mobile apps available to track alerts from an Apple® iPhone®, iPad®, and iPod touch®

Simple Installation: Leverage Your Existing Wi-Fi

- No wires, power cables, or any new construction work needed
