

SOLUTIONS OVERVIEW

Vormetric Data Security Solutions

Vormetric solutions solve data protection problems across a range of industries and use cases for protecting data-at-rest with encryption, access controls and intelligent log data around access to encrypted information. Solutions in each area:

- Support compliance and regulatory requirements
- Enable organizations to meet contractual requirements for data protection from customers and partners
- Help to protect intellectual property and financial data
- Safeguard sensitive information from data breaches

Industry Solutions	Use Cases
Overview A top level view of how Vormetric products meet the specific needs of industries	Overview Highlights how Vormetric's single platform solution helps organizations meet many use cases with a single solution set and infrastructure
Financial Services	Big Data Security
Cloud Service Providers	NAS/SAN Data Security
State and Local Government	Privileged User Access Control
Healthcare	MS SQL Server Database Encryption
Federal Government	Database Encryption
	Cloud Security

CUSTOMER QUOTE

"With commercial tools, such as Vormetric, you can actually give certain people certain access without root level privileges. You can encrypt your data in storage to set up roles of who actually gets to see the data. The admins can do their jobs, and they don't get access to any data files."

*Robert Bigman,
former CISO at the CIA
GovInfoSecurity – June 21, 2013*
