Designed from the ground-up to take advantage of 27.5-inch wheels, Trance SX 27.5 is the best of both worlds-light and agile, yet also super stable on the rough trails. The lightweight, stiff and super-strong ALUXX SL aluminum frame is mated with 5.5-inches/140mm of proven Maestro rear suspension and up to 160mm of front suspension. The frame also features Giant's OverDrive steerer tube technology for stiff, razor sharp handling in the rough stuff. Climbing or descending, there's no better way to own the trail.
