## Overview

BABACO®'s Box Truck Alarm is always on the job. Its patented and unique design forces the driver to follow specific steps, ensuring your vehicle and cargo area secure whether idling or being driven. We have thought of every possible way to protect your vehicles and their cargo. The system can be modified to fit your specific needs.

A BABACO® Box Truck Alarm is always armed and ready to protect. BABACO® alarm systems differ drastically from store bought car alarms.

- 1) Cargo , parts and tool areas are always armed
- 2) Driver must turn off the vehicle and remove the ignition key before disarming the BABACO® alarm system
- 3) Driver cannot operate the vehicle unless cargo door(s) are closed, locked and the alarm is armed
- 4) Alarm has an independent battery source located in a tamper proof enclosure
- 5) Cargo and cab can be alarmed independently
- 6) Alarm can be integrated with BABACO® GPS to provide real-time alarm notifications that can be sent to any email and also directly to your cell phone
- 7) Motion sensitivity management eliminates the false alerts that plague most car alarms

You may combine this alarm system with any of the following locks for the ultimate in Box Truck cargo and tool protection:

- TRUK-LOKI
- TRUK-LOKII
- TRUK-LOKIII
- TRUK-LOKIV

Please select these options as appropriate.

**This price includes installation at one of BABACO®'s authorized facilities.** On-site work may require a road fee or travel expenses depending on the vehicles location and or the number of vehicles to be installed.

**Please call to locate an installer near you or to arrange for on-site installation.**

## Description

### BABACO® Alarms: Designed for Box Trucks

When the driver arrives at a pick-up or a delivery location, the alarm process forces the driver to shut off the vehicle and remove all keys from the cab. These keys must be then taken to the rear of the vehicle in order to operate the door and alarm that protects the cargo area. (The same key is used for the BABACO® door lock if equipped).

Your vehicles run a great risk of being stolen when left idling, which is why we have taken precautionary measures to force the driver to remove all keys from the vehicle when at a pick-up or delivery location. Additionally, eliminating idling time during a delivery/pick-up will in turn save your company money on costly fuel charges not to mention that idling is unlawful in many cities and states.

When leaving a pick-up/drop-off location, the driver is forced to close the cargo door before driving

away or the alarm will sound. The high output siren of the alarm system cannot go unnoticed by the driver and will prevent a costly mistake of the truck being driven away with the cargo door open. By simply closing the cargo door, the alarm is engaged and the door is automatically locked (if equipped with a BABACO® lock). The driver does not have to take additional measures to arm the alarm system. This process is automatic.

**Included with this alarm are the following:**

- 1 Steel Alarm Enclosure with tamper protection
- 1 Independent Battery Supply
- 1 Control Module
- 1 Cargo Compartment Control Switch
- 1 High Output Audible Siren
- 1 BABACO® Ignition Kill Module
- 1 Motion Detection with Anti-Tow Protection
- Armored Door Sensor(s)

**Additional Features and Benefits**

- The alarm operates off its own power supply
- Programmable features to fit customer needs and vehicle body types
- The alarm control module is securely protected in a steel enclosure inside the Box Truck body (as opposed to under the dashboard which is easily accessible and defeated)
- The alarm system has tamper protection to determine if the alarm is being accessed or modified in an unauthorized manner or if anyone tries to bypass the ignition.
- The alarm has protection to determine if the vehicle is being accessed or used in an unauthorized manner.
- The system also has sensors to detect if the vehicle is being towed.
- There is a BABACO® ignition installed to help prevent the vehicle from being stolen. The BABACO® Ignition Kill/Starter Interrupt and stops the vehicle from starting
- Multiple independent partitions protect different parts of the Box Truck with alarms
- All components are manufactured and designed especially to operate and withstand the harshest of environments.
- It is impossible to shim or bump our locks.
- One Key Operation: Use the same key to operate your alarm system and door locks. The driver needs only one key for the system; whether it includes alarms, locks, ignition kill, and/or sensors.
- On board Self Diagnostics

**Optional Features**

RF Keyless Operation GPS Integration (Real Time Monitoring, Remote Alarm Notification, GPS with location)  
Cab Alarm

**Accept No Substitutes**

Others claim to have products that are equivalent to ours, however many of these products have been designed specifically for car and home installations. Babaco manufactures its security products specifically for commercial vehicles. There is no substitute to our patented system which is exclusively designed for Vans and cargo vehicles and not available off the retail shelf. It is impossible to duplicate our keys anywhere but BABACO®.
