Certification and Testing

Certification Guides

Testing is a key component of The Open Group's Open Brand certification program, which includes UNIX® certification, LDAP certification and others, and which offers buyers a guarantee of conformance.

[Test suite versions and dates of applicability](#)

- » [Open Brand Guide](#)
- » [UNIX V7 Guide](#)
- » [UNIX 03 Guide](#)

Only current valid test suites can be used for certification. The above link can be used to find out which test suite versions are valid for certification.

[Testing requirements by product standard](#)

The Open Brand certification program is organized around Product Standards. Which test suites are required for different certification programs is defined here.

Documents

[Conformance Statement Questionnaires \(CSQs\)](#)

- » [Product Standards](#)
- » [Registration Forms](#)
- » [FAQ](#)

Optional and implementation defined behavior often has to be described in a conformance statement as part of a certification submission. The above links lists the blank templates. An online web system is provided for CSQs within The Open Brand.

[Interpretations \(support customers only\)](#)

Certain Test result codes must resolve to pass by having an associated record in the interpretations database. Access requires password authorization

More information on our test procedures and processes are [available here](#)....

[Product Registration checklists](#)

Useful step-by-step checklists for a successful certification campaign.
