This pathway card outlines:

- Bcl-2 signaling in cellular apoptosis
- p53 signaling in apoptosis and gene transcription
- Death receptor signaling
- Inhibitors of apoptosis signaling and cellular apoptosis
- Related products

Apoptosis, or programmed cell death, is regulated by the Bcl-2 protein family, p53, inhibitors of apoptosis and signaling by death receptor ligands. Dysregulation of apoptosis involving these pathways can result in cancer.

Use this apoptosis and cancer signaling pathway card to discover more about the signaling pathways that regulate apoptosis.
