Value-Added Services

The best blend for high performance

e4e provides a comprehensive suite of Value Added Services that help you deliver more effective, efficient, and affordable healthcare.

Skyrocketing costs and the healthcare reform mandates have demanded the need for transformation of the US healthcare ecosystem. To assist our clients meet these challenges, we have developed a suite of Value Added Services, which include:

- DRG Assurance and Validation Services
- Clinical Documentation Improvement
- HIM Operational Review Services
- RAC Management**

Medicare's Recovery Audit Contractors (RACs) have become a standard requirement lately and our expertise in this domain can help you be prepared. We identify and quantify the financial risks posed by the RAC program through a data-driven approach. We focus only on issues and specific accounts with the highest probability of coding, billing and documentation errors. Our RAC audit engine can run checks on your entire data instead of just random sampling of a few claims. Thereafter, we work with you to mitigate the identified risks, to better manage the process, and to stop losing Medicare revenue. We provide:

 - RAC risk assessments
 - Transaction auditing of targeted, hospital-specific MS-DRG, hospital outpatient, and physician service accounts
 - Support in deployment of RAC management programs
- HoCAS
- Medical Record Audit Services**
- HEDIS Abstraction

Provider Solutions

- Medical Billing Companies
- Integrated Practice and RCM
- Coding and Compliance
- Hospital Services
- Hospital Coding

Payer Solutions
