

Cast Products, Inc. is focused on delivering high volume engineered zinc die cast parts at a competitive price without sacrificing quality, service, or integrity. How we accomplish this is simple:

We Analyze and Evaluate - We start with a solid understanding of your business, technical, and commercial needs. During this step, we gather as much information as possible about your operations and requirements so that we can present the best solutions. Customers who are comfortable sharing information about what truly impacts cost benefit the most from this process.

We Recommend Solutions - Once we fully understand your needs, our engineering and manufacturing teams work to deliver the best tooling and parts production solution for your business while always being mindful of cost. We will present you with accurate quotations and provide all the information you need to make an informed evaluation.

We Design and Deliver - This is where Cast Products, Inc. outperforms our competition. We have experienced engineering and production staffs with a total commitment to customer satisfaction. Cast Products, Inc. utilizes industry-leading technologies to deliver cost competitive tooling and production packages for our customers.

THE DIE CASTING PROCESS

Since 1966, Cast Products, Inc. has been a North American leader in design and full-scale manufacturing of precision zinc die cast components. Although the majority of our current production utilizes the Multi-Slide die casting process, we are equally strong in the manufacture of larger, Conventional Hot-Chamber die casting parts. We have over 43 Hot-Chamber die cast machines ranging in size from 2X2, 4X4, 6X6, 8X8, 25 Ton, 60 Ton, 150 Ton, 250 Ton, and 300 Ton to meet and exceed your every production request.

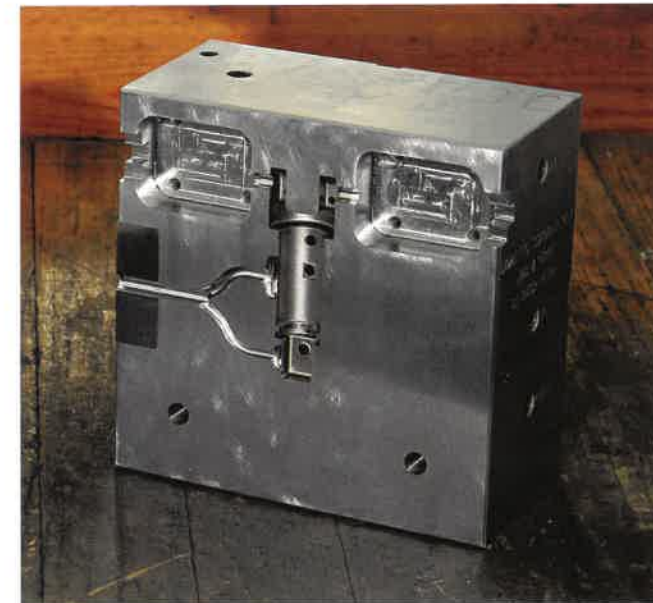

Advances in multi-slide, hot chamber zinc die casting have established this technology as the process of choice for complex precision components. Multi-slide casting technology can economically replace components manufactured by a variety of other processes, often with a substantial cost savings and significant performance improvement.

Our Goal: To provide a Worry-Free Experience and Superior Value by utilizing our innovation and expertise from design to delivery for customers that desire more.

TOOLING SOLUTIONS

Our part and tooling engineering teams work side-by-side to ensure that your specifications are met and that every opportunity to maximize production is explored. Our approach includes these key components:

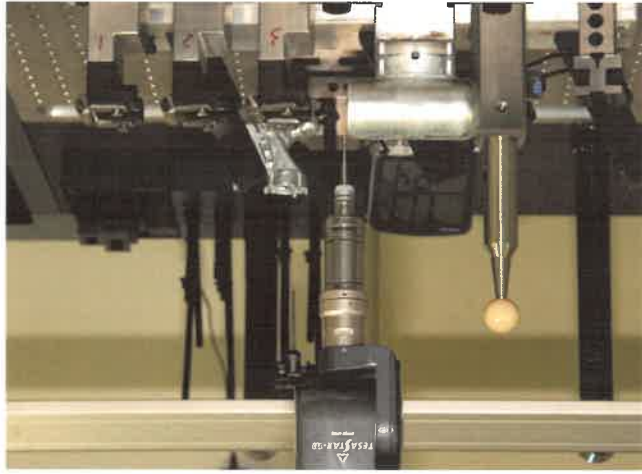

- **Cost and Budget**- Cast Products, Inc. considers the total cost of every die we design. We initiate expense, maintenance and replacement strategies so you have no surprises.
- **Quality**- Our tools are designed for optimum quality and longevity and our tool management process monitors die performance and ensures consistent part production.
- **Design Review**- You can count on Cast Products, Inc. to assist with new product designs and provide expertise and flexibility during critical prototype phases...especially when time is of the essence.

OUR QUALITY COMMITMENT

Cast Products, Inc. is proud to be an ISO registered company since 2000. We take quality seriously and provide the resources necessary to monitor the performance of our processes to demonstrate continual improvement.

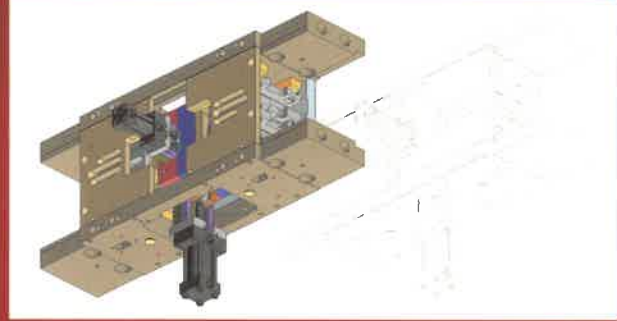

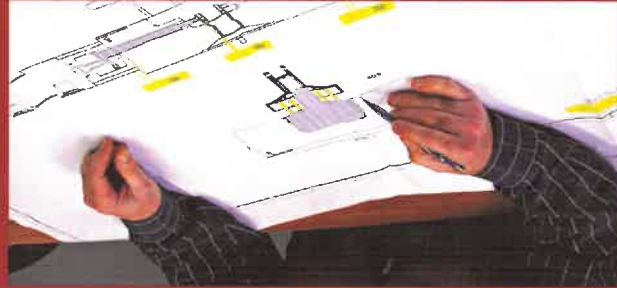

The benefits of ISO certification include process improvements, reduction in scrap, increased quality awareness, consistency in operations, process ownership and increased confidence in workmanship. Quality is inherent to our processes throughout the life cycle of each part produced. We communicate with our customers from the earliest stages of development to ensure that we share the same goals and to take advantage of our experience and expertise.

Cast Products, Inc. utilizes state-of-the-art measurement equipment and Advanced Product Quality Planning procedures which:

- Reduces lead time
- Increases our ability to deliver quality products on time at a competitive price with reliable and maintainable systems
- Identifies and addresses customer expectations.

ENGINEERING

The Cast Products engineering group is the best resource for the development of your next project. Whether you have a new or existing zinc casting, a material conversion, or a multi-piece assembly, our award winning design team can offer you the technical and creative design expertise to make your project a success.

We work with our customers on design consultation with tooling in mind. Our team begins by acquiring information in order to understand your casting needs. This includes a thorough review of the casting application, as well as specific technical and commercial issues. Using decades of die casting experience, our design team can help you create the best casting design for your application.

The best way for an American manufacturer to compete in the global market is through a combination of innovative designs and superior quality tooling. The seamless transition between our engineering group and our in-house tooling department results in a level of quality which is unmatched in the industry.
