Product description

Enjoy the freedom of Wi-Fi connectivity for any of your Ethernet enabled devices at home or in the office with IOGEAR's Ethernet-2-WiFi Universal Wireless Adapter. This is the ideal solution for devices that do not have built-in Wi-Fi and is universally compatible with any device with an Ethernet port. Avoid the clutter of cables and connect devices such as HDTVs, game consoles, and Blu-ray players to your Wi-Fi network. Older laptops, A/V receivers, network printers and other Ethernet only devices leave you at the mercy of a hardwired data connection. With IOGEAR's Ethernet-2-WiFi Universal Wireless Adapter, you can breathe new life into your legacy electronics by giving them Wi-Fi capability. Using dual antennas (2T2R), the adapter delivers data rates up to 300Mbps and boasts speeds twice that of IOGEAR's Universal Wireless-N Adapter (GWU627). The increased speed supplies sufficient bandwidth for faster file transfers, music downloads, video streaming, online gaming, and HD multimedia applications. Designed to be thinner and lighter to make applications clean and clutter free, the Ethernet-2-WiFi Adapter is 40% smaller than its predecessor, without having to sacrifice performance. The compact design gives you the freedom to place your home entertainment center practically anywhere and stay connected to your wireless network. No need for power from an outlet, this

device is powered by a USB port giving you more freedom to place it anywhere. For instance, the prevalence of USB ports on TV sets allow for simple and fast connection of the Ethernet-2-WiFi Adapter to any USB enabled television using the included USB power cable. Instantly connect to your network with the push of a button. This device supports WEP, WPA, WPA2, TKIP and AES encryption standards to keep your wireless connection safe from intruders.

Worked Great - It's now junk

Reviewed in the United States on April 8, 2018

Verified Purchase

This device works great. I'm using it with a Tivo MiniVox which otherwise needs to be hardwired to the router which is also hardwired to the Tivo Roamio in the family room. Using this IOGear Ethernet 2 Wifi adapter, its eliminated the need for an impossible cable run. I can now use a Mini in our Master Bedroom. Setup could be a little easier, though. My router interface is easier to use than this device. The instructions are good but the process should be easier. I would have given it five stars if setup were easier. The device deserves a 5, setup deserves a 2.

Update: May 23rd - this unit is useless as it's now intermittent and won't hold a signal. That's $41 I'll never see again. I DO NOT recommend this device.

Read this if you think you want to use this with a printer

Reviewed in the United States on March 24, 2020

Verified Purchase

The manufacturer touts that you can use WPS to quickly set up this item. That may work for some items that just need a simple internet connection.

However, an ethernet printer won't be recognized by your PC with this item unless you do the manual set up process which requires you to plug the device into your computer's ethernet port in order to correctly configure the device. Interestingly enough, most PCs today *DO NOT HAVE AN ETHERNET PORT* . This setup process will not work with a USB port expander that has an ethernet port either so for most PC owners today, this device cannot be used to connect a printer.

You'd think something like this would be in the description, or in the user's manual but it isn't so here's your fair warning.

Gets Extremely Hot and then dies!

Reviewed in the United States on March 5, 2018

Verified Purchase

I was able to setup the device with no problems. However, I noticed it was getting very hot. Speeds were what I expected them to be. After about 10 minutes of use, the connection was lost and would not reconnect. I unplugged the power to the adapter and waited about 20 minutes for it to cool down. After it cooled down, I reconnected power and the connection was restored for about 5 minutes when it failed again. I am returning to Amazon for a refund.

bad experience

Reviewed in the United States on February 8, 2019

The installation instructions were terrible. I would be surprised if a normal person could install this. For something that should be plug and play I gave up after about an hour. I then called their tech support and to their credit they had a live person who seemed knowledgeable enough, and who tried to be helpful. He went through about 50 screens changing settings on my computer, and pronounced the product to be working. I walked into another room, plugged the device into the product I wanted it for, walked back to my computer and there was no connection to the internet. WiFi was not even an option on my computer anymore. I got my firm's computer guru on the phone and he started troubleshooting the device. It disconnected the guru about 15 times and would not generate an IP address, nor accept a manual IP address. It was bizarre to have the guru remotely troubleshooting. Plug the device in and my guru was disconnected. Unplug the device and the guru's connection to my computer would reestablish. The guru said that there are lots of problems reported on the internet about this device not accepting or

generating an IP address. My computer guru apologized for recommending the device and is right now researching a device that hopefully will work better. good luck.

Easy to use and works great!

Reviewed in the United States on June 29, 2019

Verified Purchase

I'm an IT guy of almost 20 years and have used these types of devices when needed. Some of the junk out there creates a network of its own and doesn't pass through the IP address of the wireless network. This creates problems for printers, DVR's and such.

I've used the IOGEAR wired to wireless adapters exclusively for bridging wireless to wired and had no issues.

Setup takes me just a couple minutes, once setup they do exactly what I need.

If your router hands out an up address on DHCP the little magic box passes that exact IP address over to the device. The device itself has an IP address that's default of 192.168.1.254, I recommend changing it to .250 as SOME firewalls use .254 as a gateway.

You can use these and trust these, they just work!!!

How to Make a Whole-house Hotspot

Reviewed in the United States on March 2, 2018

Verified Purchase

I was looking for a way to use my hotspot to cover my entire house.

I connected this to my Luma router to spread the signal from my ZTE Warp to my entire house. I manually set up the IOGEAR because my first attempt at using the WPS button did not work. I prefer to set things up manually anyway. The instructions were clear and easy to follow.

I found a location in my house that had the strongest signal and placed the hotspot, Luma, and IOGEAR in that location. I even plugged the IOGEAR USB cable into the Luma to take power from it reducing the number of power outlets required.

Using Speedtest.net to check performance. I connected to the ZTE Wrap directly and then to the Luma. The speeds were equivalent. No real loss going through the IOGEAR and Luma

Not 300 MBit/s in Reality
Reviewed in Canada on March 30, 2021
Verified Purchase

This thing does the job, but a few things are to be considered:

- Configuration works best using Chromium or Chrome, don't try IE
- Admin interface does not support https, so this may not work for you if you are on a network you don't fully trust
- This device reboots for any minor change you make

But there is one real drawback: the Ethernet interface on this is only 100 MBit/s which is the upper limit for your throughput. 300 Mbit/s is thus impossible in reality and really just false advertising.

Need a wifi adapter for an ethernet enabled device? Look to buy something other than the GWU637
Reviewed in Canada on November 12, 2020
Verified Purchase

The GWU-637 is difficult to configure, in part because the configuration process only works with older versions of Internet Explorer operating on Windows 7 platforms. The configuration process does not work with Chrome or Windows 10 platforms. The provided documentation is vague and does not highlight any of these limitations. The documentation appears to be from the Windows XP era. If one has an understanding of how to configure network devices, then throw the provided documentation in the garbage and figure it out on your own.

As for the operation of the GWU637, it is highly dependant on the orientation and proximity of the device to the wifi access point. The wifi connectivity is easily lost as the distance from the access point increases, or if the antenna orientation is less than optimal.

All in all, I expect that there are other, better products on the market.

Produit techniquement intéressant, mais difficile à mettre en oeuvre faute de documentation ad-hoc
Reviewed in France on March 3, 2020

J'ai acheté ce pont WiFi->Ethernet pour avoir une solution de secours quand ma connexion ADSL est HS (la dernière fois, plus de 8 jours :-(.
J'utilise alors la connexion 4G partagée ("hotspot WiFi") de mon iPhone comme alternative, en conservant grâce à ce GWU637 une connexion Ethernet fonctionnelle pour tous les appareils qui ne peuvent se connecter directement en WiFi WPA2 (alias WPA-PSK (AES)). Malheureusement, j'ai passé des heures avant de réussir à configurer correctement ce pont, par la faute d'une notice incomplète et d'un support de IOGear.com nul.
A noter que je suis sur Mac et que les symptômes et solutions sur PC pourraient être quelque peu différents.

Pb #1 : La configuration du GWU637 échouait à la fin avec un message incompréhensible quand initiée depuis le navigateur Chrome. Le support IOGear.com me réponds (en anglais) "désolé, nous ne pouvons rien pour vous".
