XML Pipeline™

**Closer Look at our
Airo Telematics Platform**

The **Airo Telematics Platform** is a turn-key modular software solution with front-end interfaces, developer tools and comprehensive OTA administration controls that combine to support the needs of enterprises to manage their mobile workforce.

Airo Telematics Logic™ software, **Airo Management Application™** user-interface and our **XML Pipeline™** combine to intelligently manage and route encrypted location and enterprise data with very high reliability and low latency across a multitude of transport technologies to any number of customer back-end applications, locations and services.

The Airo Telematics Platform enables:

- Robust administration and device management controls
- Rapid integration and flexible customization across multiple enterprise applications and mobile devices
- Ability to prioritize information based on location or group
- Over 70 telematics and location remote controls and 30 device settings controls.

- Remote validation of location information accuracy
- Enterprise class security and scalability

The Airo Telematics Platform is your solution for over-the-air management and operation of mobile GPS devices.
