### **Stanford Linear Accelerator Center, CA**

As a managing partner of the C/P/E JV, CAPE is executing a \$19M project involving dual-phase extraction of three VOC-contaminated groundwater plumes and excavation of PCB-contaminated soil at multiple sites. All removal actions are considered interim actions, with “No Further Action” as the anticipated end result.

## **Remedial Action**

CAPE addresses the most challenging environmental issues with proven technologies and extensive self-performing capabilities. Counting on CAPE for your remediation project lets you rest assured that :

- The Job will be done right the first time
- All the regulatory requirements will be successfully met
- Safety and quality requirements will be met

Our Experience covert almost any environmental challenge you might face, from waste removal and site closures to site restoration and regulatory agency coordination and permitting. You can rely on CAPE for the perfect solution to the most difficult problems.

CAPE's broad self-perform capability allows us the flexibility to deliver cost-competitive services by self-performing work, integrating team member's expertise, or procuring local, pre-qualified subcontractors. We bring the perfect combination of expertise to any project.

Contact CAPE to learn more about our services.
