

# FUNDS™ (FUNGAFLOR DISPOSAL SYSTEM)

A TREATMENT SOLUTION DECONTAMINATION METHOD FOR JANSSEN POSTHARVEST FUNGICIDES

- Process resulting in decontaminated water in which Janssen Postharvest Fungicides are decomposed into small compounds with an acceptable risk for the environment.
- Shown to be effective on FUNGAFLOR™, FECUNDAL™, FUNGAZIL™, PENBOTEC™, PHILABUSTER™ and FUNGAMERGE™.
- Works in the presence of ethoxyquine or diphenylamine (DPA).
- Makes the treatment solution more environmentally friendly by a lowering of organic load, Chemical Oxygen Demand (COD) and Total Organic Carbon (TOC) and by increasing Biological Oxygen Demand (BOD).
- Sustainable use of postharvest treatments.
- Reduced risk for the environment.
