

RoamFree™

Advantages

Each solution in the RoamFree suite enjoys the following advantages:

- From pre-implementation scoping through the commercial phase, XIOUS-bcgi's strong consulting and domain expertise is invaluable for business requirements analysis
- RoamFree is a modular system that allows mobile network operators to choose the functionality they want – new modules can be seamlessly incorporated as needed
- RoamFree is a turnkey solution designed specifically for roaming that integrates to billing and back-office systems
- RoamFree is comprised of an entire spectrum of roaming offers, which reduces multi-vendor dependencies
- RoamFree is managed in a hosted environment by XIOUS-bcgi
- RoamFree is targeted towards increasing roaming revenue by adding more roamers and increasing their usage and time on the network
- RoamFree provides a seamless customer experience

RoamFree is a complete suite of roaming solutions that is tailored for mobile operators who have the need to increase their roaming revenues while keeping their capital and operational expenses low. RoamFree consists of advanced features which enable roaming services through a solution suite that is technologically agnostic.

RoamFree is backed by XIOUS-bcgi's years of experience in configuring, launching, and managing roaming for mobile operators. Apart from providing an instant global roaming footprint, RoamFree offers mobile operators value in terms of a comprehensive solution that improves revenue and increases roaming usage on the network.

It is a best-in-class offering comprised of the following plug-and-play solutions:

InstaRoam

InstaRoam offers instant roaming access with a single agreement into more than 500 networks in more than 250 countries.

RoamFree's InstaRoam eliminates complex testing procedures and the need for securing operator agreements. InstaRoam is a dual-IMSI based solution that allows customers a global roaming footprint.

PowerRoam

PowerRoam allows operators to control their out-roamer network selection. It is a powerful and proven network-based solution that enables redirection of roaming minutes to a preferred network.

PowerRoam empowers operators to decide the percentage/segment of where their out-roamers should roam in a particular preferred network.

Reachout

Reachout is a real-time solution which enables the provisioning of services to national as well as international roamers through SMS, IVR, and other value-added services. It is an ideal solution for operators to promote mobile service usage and advertisement.

SmartRoute

SmartRoute identifies calls to inbound roamers and near-roamers from home subscribers and smartly routes them within the network.

Operators have the option to pass these interconnect cost savings along to subscribers or to keep them as increased revenue potential.

Virtual Home Environment (VHE)

Virtual Home Environment is designed to allow call completion of an incorrectly dialed call to the home network or to the visited network while enabling the translation of a short code into its corresponding long number.

The main benefit of VHE is to achieve a higher answer seizure ratio (i.e., ratio of successful calls to the total number of calls attempted) by ensuring that in-roamers get seamless access to services while roaming in the visiting network.
