Bacteria Control

COMBO-CIDE™ bacterial control – a unique combination of biocides offering more effective bacterial control using less chemicals.

Bacteria Control

FTSI™ Biocides: A broad range of targeted additives to control bacterial contamination downhole.

Bacterial contamination can hinder well stimulation treatments and impair recovery efforts. At FTSI, we create biocides that target specific microbial problems without affecting the fluid system or stimulation treatment. Through constant research and a diligent focus on customers' needs, FTSI has developed a wide range of biocides to efficiently control bacterial contamination.

FTSI Biocides

COMBO-CIDE™ (More effective using less chemicals)

DAZOMET BASED

- ICI-3240 (Provides synergy with friction reducers)

GLUTARALDEHYDE BASED

- ICI-150
- ICI-125

THPS BASED

- Tolcide PS75

TOLCIDE PS50A (UNIQUE FORMULATION TO BREAK DOWN BIOFILMS)

- Tolcide PS20

QUAT BASED

- ICC-145
