Fluid Technologies

ECO-Green™ System Solutions maximize well production with stimulation options engineered to be both effective and environmentally benign.

FTS International™ customized solutions are developed by our team of scientists with a "can-do" spirit of innovation and a commitment to caring for the environment. ECO-Green™ System Solutions are developed using the American Chemical Institute's Principles of Green Chemistry.

ECO-Green™ System Solutions: Proven Performance. Planet Approved.

Featuring our revolutionary Slickwater Green® customizable powdered blend. This product enhances water re-use, simplifies logistics and can reduce transportation and delivery needs at the well site.

Another pro-planet solution – Venus Green™ Acid System offers a green alternative for carbonate reservoirs.

Other FTSI ECO-Green solutions include

- Highly Efficient Friction Reducers based on Green Chemistry
- NPD™ Solutions Patented Nanofluid for Enhanced Fluid Recovery
- Green Surfactants
- COMBO-CIDE™ Eco-friendly, Enhanced Bacterial Control with Reduced Biocide Loadings
