INDUSTRIES SERVED

**Water & Wastewater Treatment**

Pentair Water Solutions has been involved in the water and wastewater industry for more than 100 years and in that time we have gained an intimate understanding of all facets of the industry. As the demand for water grows, Pentair is among leaders in the field working to deliver solutions that make more efficient use of this increasingly scarce resource.

We have the expertise and capabilities to design, build, operate and maintain water and wastewater treatment systems that deliver world class water sources back to where they are needed most. Our pipeline solutions are used to redistribute these water supplies back to end users with our irrigation systems being one way we can help customers use these allocations efficiently.

Our innovative designs help plants comply with changing regulations, while increasing plant efficiency and productivity to meet the increasing demand for new water sources. Our products and services are typically used in:

- Water treatment plants
- Sewage treatment plants
- Recycled water distribution networks
- Biosolids management facilities
- Water distribution networks
- Wastewater distribution networks

Our range of products and services used in water and wastewater treatment applications include:

- [Steel, ductile iron, PVC, PE and ABS pipes and pipeline fittings](#)
- Stainless steel [repair clamps and couplings](#)
- Pump systems
- [Valves](#) and actuators
- Water flow metering systems
- Water quality monitoring systems
- [Installation training & support](#)
