

Lease Benefits

When you enroll in solar leasing program through an established company like ours, instead of buying a system and dealing with the logistics of installation on your own, you gain a number of benefits. Below, we've outlined a few of the biggest advantages of leasing for homeowners like you.

- ❖ The up-front cost of buying – coupled with all of the steps involved in installing a system – keeps many homeowners from going solar. Solar leasing offers a bright alternative to owning a solar power system with a low barrier to entry.
- ❖ With solar power, you can lock in a portion of your energy prices today and watch your savings grow over time. We offer innovative solutions to maximize the amount of energy the system produces, while minimizing your monthly utility bill for both the short and long term.
- ❖ NRG Home Solar works with authorized dealers to take care of the entire process at no additional cost to you. Once you decide to go solar, we will take care of the rest.
- ❖ Enjoy worry-free coverage for the life of the lease term. NRG Home Solar monitors your system online to ensure your solar installation is running at its peak. If maintenance or repair work is needed, we take care of it.
- ❖ We design a solar solution specifically for your home's needs. Our guarantee promises that – if the system doesn't produce the kilowatt-hours stated in the lease – we pay you for the difference. And if your system produces more kilowatt-hours than stated, the power is yours for no additional charge – free!
