THE WORLD IN 360°

An Automatic Panorama mode makes shooting 360 photos easier than ever. Just hold the Osmo up above your head and tap the shutter release. The camera will rotate, capturing images as it goes while staying completely level. Don't just get a snapshot of a piece of your travels, make a memory of the whole scene.

CAPTURE TIME

Osmo helps you record the passage of time more easily than ever with its intelligent Timelapse modes. Whether moving through the hustle and bustle of Hong Kong's streets, exploring dense Brazilian rainforests, or recording daily life, you can capture timelapses automatically and smoothly without a tripod. For more advanced users, you can even use the Osmo as a motion control system to add a new dimension to timelapse creativity.

TRIPOD FREE LONG EXPOSURE

Take long exposure shots with absolute crispness and sharpness, even without a tripod. The stabilization system in the Osmo keeps the camera totally still so you can freehand capture stills of up to 2 seconds. With practice, you can get even longer shots. Now you can capture night time cityscapes, or blur out your subject's background the moment inspiration strikes.

ADVANCED STABILIZATION

The DJI Osmo brings DJI's recognized leadership in camera stabilization down to the ground and into your hands. A 3-axis stabilization system completely integrated with the camera cancels out your movements in three directions so it stays still even if your hands shake or wobble. This is the first time this technology is available in a camera you can hold.

Handheld Video

Shot on Osmo

POWER IN YOUR PALM

The grip on the Osmo is precisely engineered with materials selected for comfort and durability, and designed to ergonomically fit the palm of your hand. Conveniently placed buttons and controls keep important functions by your thumb for instant access.

Put your smartphone in the included Phone Holder to see what your camera sees and control it with a tap of your finger. Your phone is also the home of all the Osmo's powerful intelligent shooting modes.

REMOTE CONTROL

All of these shooting modes can be controlled and triggered by remote control from within the DJI GO app on your smartphone. Mount the Osmo on a tripod, or any of the other available mounts, and take a few steps back to a position from where you can easily overlook the scene then control the camera when you're ready.

Video Resolution	Up to 4K (4096x 2160)	Up to 4K (4096x 2160)	Up to 4K (4096x 2160) RAW

PERFECT VISION

The Osmo's Zenmuse X3 camera works as one with the stabilization system. It brings you 4K video at 24, 25 or 30 frames per second so you could even shoot for the big screen, and captures photos at 12 megapixels in Adobe DNG RAW opening up shots that you never thought possible before.

The Osmo is also compatible with the all-new X5 series of cameras, bringing you highly stabilized imaging with all the benefits of a large M4/3 sensor.

ACCESSORIZE

The Osmo supports a number of mounts and extensions so that you can use it in almost any situation. A Tripod lets you set the Osmo down for added stability or long-distance control. The Bike Mount takes the Osmo for a ride and an Extension Rod opens up a range of brand new angles.

INTELLIGENT SLEEP MODE

Put down Osmo, and it automatically enters into sleep mode after a set amount of time. Entering sleep mode not only extends your Osmo's battery life, but also protects the advanced electronics inside for a longer life. When you wake up Osmo, it's ready to go instantly, enabling you to capture life's moments as they happen.

AUDIO

An integrated microphone allows onboard audio recording. With advanced features like audio gain settings, you can be sure you're not only getting the shot but also capturing the sound. A standard 3.5mm port is also available, so you can plug into your own microphone.
