

For facilities that provide anesthesia to a pediatric population, Sleepy Scents fills a void that has long existed. For more than 50 years, anesthesia providers have tried various methods of adding flavors to anesthesia masks as a way to distract children from their environment, as well as mask the scent of various anesthetic induction agents. Over time, many attempts have been made to obscure the pungent odors of Sevoflurane and Halothane during anesthetic induction. With Sleepy Scents, a safe, effective and value-conscious method has finally been achieved.

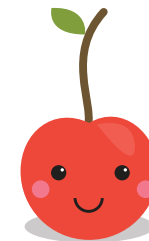

FINALLY, SOMETHING KIDS LIKE WHEN UNDERGOING ANESTHESIA.

Add taste and scent to any anesthesia mask with water-based Flavorant Towelette Swipes, for use in the anesthesiology environment.

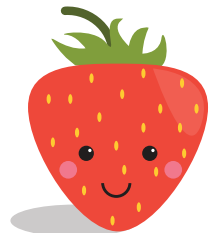

THE FLAVORANT MATERIAL DEVELOPED AND USED IN SLEEPY SCENTS HAS THE FOLLOWING ADVANTAGES:

- Great-tasting fresh flavor with appealing smell
- Water-based
- Does not contain alcohol
- Non-flammable
- No petroleum-based materials
- Eliminates greasy skin that prevents tape adhesion for securing LMA or ETT
- No Dyes or Colorants
- Contains no Methyparaben
- Traceability (Lot numbers on every pouch)
- Expiration Date
- Single use
- Sugar-Free
- Safe if ingested
- Manufactured in FDA-certified lab (US based)
- Kosher (certificate available)
- 3-year shelf life
