PRODUCT OVERVIEW	TECH SPECS	CUSTOMERS ALSO VIEWED	SHIPPING

As data centers and cloud service providers embrace high-performance servers that support higher workload densities, they increasingly need dense 25/100 GbE switches in leaf-and-spine topologies. The Brocade SLX 9140 switch is designed to help organizations stay ahead of this application- and data-driven networking challenge with a broad choice of interface speeds to seamlessly evolve from existing 1/10/40 GbE to 25 and 100 GbE capabilities. The Brocade SLX 9140 enables organizations to design networks that accommodate a variety of different applications and east-west traffic patterns. And with its high density, scale-out architecture and low power design, the Brocade SLX 9140 delivers a cost-effective solution that optimizes power, cooling, and data center space. With a rich set of Layer 2 and Layer 3 features and advanced visibility and automation capabilities, the Brocade SLX 9140 is built to address dynamic growth in virtual machines, distributed applications, and digital transformation.
