Technology

ICAP invests heavily in technology and market infrastructure to build and maintain our market-leading positions.

Technology is at the heart of our business. The ability to transact on systems with the highest level of stability is of vital importance to our customers. We ensure that our global voice broking and hybrid Electronic Markets trade platforms not only meet the current needs of our customers but also anticipate the greater reliance on electronic transactions as regulatory changes come into force in Europe and the US.

ICAP's technology spend is not purely focused on the provision of access to market liquidity but also enable intelligent modern trading by providing links to transaction data repositories and CCPs.
