

OUR SERVICES

VIKOR ensures that you are equipped with our full turnkey resources from planning to building to the maintaining of your site. We consider and think through everything, while keeping the whole site in mind. We understand that efficient project development requires careful planning, effective design, efficient construction and proper maintenance. Our team brings more than 30 years of knowledge and will provide the full VIKOR experience.

PLAN

Efficient project development requires careful planning. VIKOR will take charge in working for you to find the ideal site and negotiate the acquisition of the property. We then perform all of entitlement and regulatory services necessary to prepare the site for construction.

DESIGN

A successful build begins with comprehensive design and research. At VIKOR, we will prepare the surveys and map out the architecture and engineer the project for a seamless construction process.

BUILD

Good design must be matched with excellent construction. VIKOR will complete all aspects of the construction. We'll handle the civil work, stack the tower, and install the lines and antennas.

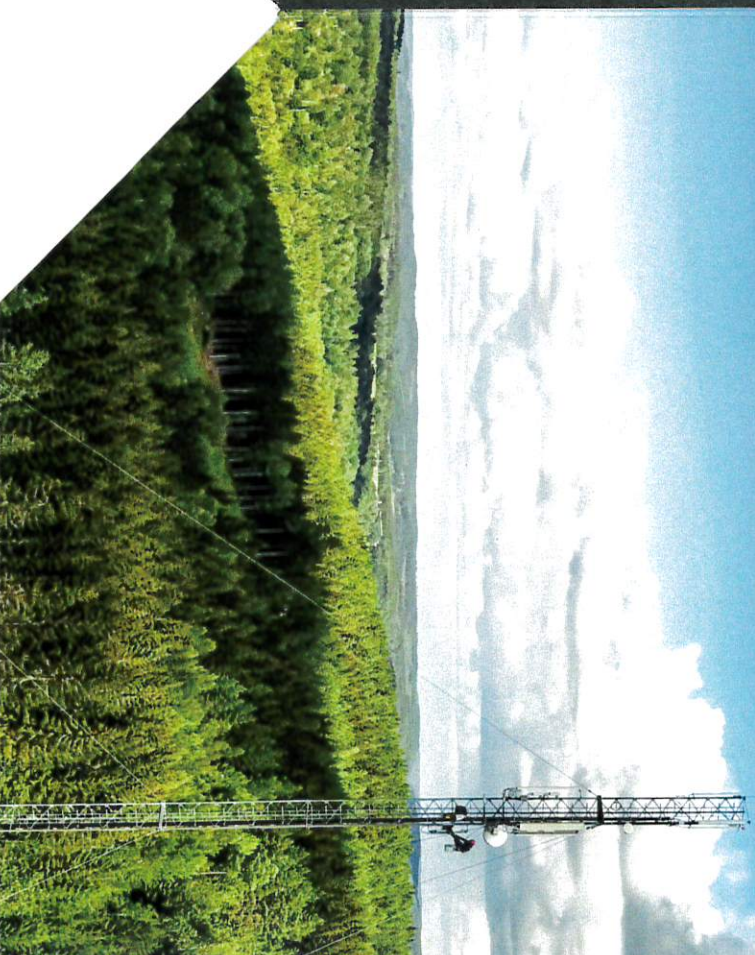

MAINTAIN

Once it's built, you'll need someone to help keep it operational. VIKOR adheres to the highest maintenance standards and is dedicated to sustaining the structure so that you can get the most out of your investment.

DEDICATION TO ELEVATION

We are a full-service wireless infrastructure construction company specializing in work for the wireless, public utility, wind energy and other sectors.

We are dedicated to staying at the forefront of our ever-evolving industry. With our one-of-a-kind, state-of-the-art training facility, we are equipped to train our employees and better serve our current and potential clients along with their customers.

TURNKEY SOLUTIONS

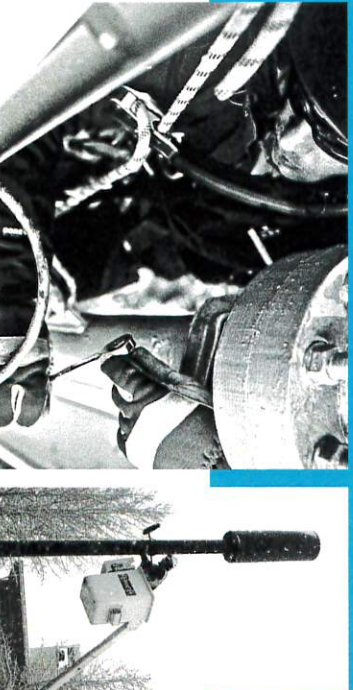

VIKOR Teleconstruction brings power to the nation through the industry. Our highly trained, experienced crews perform work on wireless, broadcast, microwave, wind energy and utility. Here are just a few ways we elevate the industry through turnkey solution

- Design/build new towers
- Antenna system installation/maintenance
- Tower maintenance, including FAA lighting
- Full range of test equipment including PIM, sweep, fiber, azimuth and downtilt
- Microwave system installation and integration
- Guy anchor corrosion control
- Site acquisition
- Small cell and DAS
- Electrical services
- Civil construction

ELEVATING THE INDUSTRY

We are a leading provider of wireless infrastructure, elevating the industry by elevating our offerings, our workforce and our quality of service. With offices in the northern plains and mountain west, we dedicate a good share of our resources to projects throughout the United States.

We are a company dedicated to offering our industry-leading turnkey services in an ever-expanding footprint in order to better serve our current and potential customers. VIKOR, formerly known as Sioux Falls Tower & Communications, has established a reputation as leaders in quality, integrity and experience since 1989.

BE BOLD. BE VIKOR.
