Advisory Board
Advisory 1
More Insights
There is high number of clients connecting to the AP (52 clients) (see client number in AP detail page)
Potential Issue
Too many clients on a AP may slow down the client throughput
Advice
Limit the max number of client of the AP (go to network configuration setting)
Add more AP in the neighborhood to balance the loading

Smart Cloud
Artificial intelligence (AI) enables EnGenius Cloud to predict issues before they occur and provide accurate recommendations to proactively improve performance. EnGenius Cloud's Advisory Board uses AI to continuously analyze networks and report potential problems, often before issues occur.
