## PartsSource Releases PartsSource Pro 2019

June 5, 2019

### PartsSource Releases PartsSource Pro 2019 Adding Guaranteed Stock, Real-time Decision Support and Advanced Education Options to Improve Medical Equipment Maintenance and Uptime

*Advancements expand knowledge for clinical engineers and reduce backorder time of critical parts that represent 127 262 days of delays*

To speed time-to-repair, PartsSource leverages data science and predictability of which mission-critical replacement parts are out of stock or slow to ship. These critical products now will be guaranteed in-stock at the PartsSource warehouse, ready for prompt shipment to members of the PartsSource Pro community, saving customers significant stock out or backorder days.

### **Instant Access to Technical Documentation**

Before a purchase, a clinical engineer often must validate a repair or replacement part against the equipment make and model to ensure the right product is selected. Part validation can be difficult because technical documentation of the equipment is often outdated or difficult to access. As a result, the wrong part may be ordered inadvertently, causing uptime delays.

To improve part identification, PartsSource Pro now offers an integration to equipment documentation inside the PartsSource online platform, providing instant access to the most up-to-date manual and preventive maintenance schedules for validated part selection.

### **Rebates on Elite Online Training Courses**

Clinical engineers are increasingly managing more advanced equipment, which can be difficult when advanced training courses are required to learn the intricacies of the equipment but professional educational budgets are tight or non-existent.

Now, members of the PartsSource Pro community will receive a discounted rate on hundreds of elite training courses for radiology, mammography, CT, ultrasound, networking, PACS, and DICOM, that will help them lower cost of service and improve uptime.

“While we started as a parts company, hundreds of top performing healthcare organizations in our PartsSource Pro community rely on us to help standardize procurement processes, pricing and products and hold us accountable to improve productivity, cost savings and quality,” said Philip Settimi, M.D., President and CEO of PartsSource. “The release of PartsSource Pro 2019 further empowers customers with real-time access to information, advanced training and critical products to get mission critical assets up and running for their patients.”

### **About PartsSource®**

PartsSource’s proprietary procurement platform eliminates friction from the healthcare supply chain by delivering evidence-based decision support for healthcare technology management (HTM). Through integrated workflows and

standardized processes, PartsSource empowers HTM teams to make data-driven decisions, manage long-tail spend, increase equipment uptime and track the quality of clinical assets.
