

Qwire creates collaborative cloud-based solutions for music clearance, licensing, and reporting within the music synchronization business.

## qwire Cue

A modern approach to cue sheet management and reporting

- **Simplify cue sheet creation** by importing spreadsheets in almost any format.
- **Streamline your process** by replacing in-house or 3rd party software, or by implementing a centralized system where none existed before.
- **Improve accuracy and eliminate duplicate data entry** through integration with qwireClear, Qwire's licensing management tool, and qwireTracks, Qwire's music rights database.
- **Save time** with in-app task management and electronic submission to the performance rights organizations (PROs).
- Get your team working from a single source of information to **improve communication & collaboration**, rather than using the antiquated, inefficient, decentralized, and paper-intensive methods currently employed throughout the industry.
- Access **real-time reports** that analyze current and historical cue sheet data, such as PRO market-share, songs-by-publisher or writer, and song vs. score.
