FOR COMMENTERS

Join a strong community

With Coral, your commenters can identify journalists in the conversation, mute annoying voices, share discussions, receive notifications, and see new comment alerts instantly.

FULLY CUSTOMIZABLE

Lightweight, secure, flexible, and responsive

Developers love working with Coral. You can easily connect it to your existing registration system, fully customize the look and feel, and extend the platform with our GraphQL API and by adding features to the open source codebase.

What newsrooms are saying

Coral is used across the globe in nearly 20 countries and 14 languages, in newsrooms large and small.

"They think like journalists, they constantly add improvements, and their focus is on improving the content of our comments, not just in creating a platform."

Rubina Madan Fillion
Director of Audience Engagement

"Coral is purpose-built for media, is open-source, and has the weight of large publishers behind it. The commercial commenting solutions are woeful."

Damian Cronan
Chief Technology Officer

"Coral's greatest strengths are its functionality and its flexibility. It offers us the tools we need to highlight reader voices and foster community in the comments section, while giving us the leeway to integrate our own technologies."

Teddy Amenabar
Comments Editor
