PICK CUP

THE PICKCUP IS DESIGNED TO PROTECT THE CUP EDGE WHEN LEAVING THE PIN IN!

The PickCup is a new idea that's been developed in response to the recent rule change that now permits players to leave the pin flag in the hole when putting, a rule change designed to help speed up play but which has resulted in unexpected damage to the cup edge caused by players not removing the flagstick when retrieving their ball.

So how does it work?

Well after holing out, when a player gets to the hole, if they gently lift the pin stick from the hole they'll find the the PickCup has collected their ball from the hole and it's easy for them to collect without searching inside the cup with their fingers or putter.

It saves time, is easier than bending over to collect a ball from the cup and as custodians of better green care, we're keen to stress that by removing the ball using this method rather than sticking your hand in the cup, it help prevent damage to the edge of the cup too.

The PickCup is made from weatherproof polyurethane plastic with a flex-rubber edge that helps to protect the edge of the hole, and is fitted with a universal clip so that it can be easily attached to any conventional flag stick.

Unlike competing products the PickCup conforms to the specific details of the R&A guidelines, meaning that it can remain in place during competitions too.

1) the PickCup can be secured below the 3" depth requirement from the height of the lip so not to interfere with a ball in play

2) the PickCup is easy to attach and remove but when attached remains in a static position on the flagstick, again so not to interfere with a ball in play

In addition to this, the PickCup has a patented design that incorporates a rubber perimeter to the tray, which helps protect the lip from damage when being removed from the cup but also protects the green surface if the flag stick is laid down on the surface.

The PickCup has been developed with the style and attention to detail that you would expect from Pitchfix and it feels and performs like a quality piece of equipment.

The PickCup come in two variants, the Standard and Promo versions. If you're looking for a cost effective, durable and legal solution for protecting your putting surfaces and cups, get in touch with one of our team today. **Get in touch to find out more or to make a sales enquiry.**
